Introduction

In most cases, individuals suffer from a terminal illness that causes them constant pain throughout their lives. Such a disease does not have a cure, thus, the patient depends only on the painkillers to reduce the agony they are experiencing. Moreover, understanding that irrespective of any significant effort applied, the end result will be death in the future. When such thought accumulates in the minds of sick individuals, their physical and emotional health declines. In such conditions, instead of allowing the patient to undergo extreme pain and pressure,
