Evolutionary Changes in Primates

Introduction: When paleontologists discover fossils, they determine whether they have discovered fossils of recent or early organisms. They then determine the kinds of organisms the fossils represent. If a skull were discovered and determined to be a primate skull, the next step would be to determine whether it is of an ape or a human. Because evolutionary change has occurred in both groups, the skull could be of early or modern ape or early or modern human. Because humans and apes evolved along separate lines, certain physical characteristics can be used in an attempt to classify the fossil skull as belonging to either ape (early or modern), early human, or modern human. Techniques similar to the one used in this investigation are used by anthropologists, paleontologists, and archeologists.

In this investigation, you will

- (a) examine gorilla, early human, *Australopithecus*, and modern human skull and pelvic diagrams.
- (b) measure or observe and record specific skull and pelvic structures and features.
- (c) evaluate evolutionary changes that have occurred in these organisms.

Materials: metric ruler and protractor

Procedure:

Part I. Skull Characteristics

Brain Area Compared To Face Area

The rectangles over the skulls in Figure 1 represent the area of the brain (upper rectangle) and face (lower rectangle) of each skull.

- A. Determine the area of each rectangle by measuring the length and width in centimeters and multiplying the two measurements together.
- B. Record in lines 1 and 2 of Table 1 the brain and face areas for the gorilla, *Australopithecus*, and modern human skulls. A comparison can be made as to whether the brain area is larger or smaller than the face area.
- C. Compare the brain and face areas and complete lines 3, 4 and 5 of Table 1.

Cranial Capacity

- D. Measure the diameter in centimeters of the circle in each skull. The diameter is the distance across the exact center of each circle.
- E. Multiply the cranial diameters by 200 cm^2 . This gives the cranial capacity (brain volume) in cubic centimeters.
- F. Record the cranial capacity for each skull in line 6 of Table 1.

NOTE: This method of measuring cranial capacity differs from the method used when an intact skull is available.
