**Selected Scientific Works of Hans Christian Ørsted** Hans Christian Ørsted, 2014-07-14 Hans Christian Ørsted 1777 1851 was one of the leading scientists of the nineteenth century having played a crucial role in founding electromagnetism Unfortunately for the English speaking world almost all of his research was published in other languages particularly his native Danish This book will help to elevate Ørsted to his rightful place in the history of science by finally making his most important scientific works available in English The book includes for example Ørsted's account of his revolutionary experiments in electromagnetism In 1820 he discovered that a compass needle deflects from magnetic north when an electric current is switched on or off in a nearby wire This showed that electricity and magnetism were related phenomena a finding that laid the foundation for the theory of electromagnetism and for research that later created such technologies as radio television and fiber optics The unit of magnetic field strength was named the Ørsted in his honor Selections here also show the extraordinary breadth of Ørsted's interests which range through a long and prolific career from the study of plant alkaloids and the compression of fluids to the nature of light and the natural science of beauty The writings are taken from scientific papers Ørsted's correspondence and reports of the Royal Danish Academy of Sciences and Letters The book will not only draw long overdue attention to Ørsted's own work but will also shed new light on the nature of scientific study in the nineteenth century Originally published in 1998 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and

Advanced Surface Coating Techniques for Modern Industrial Applications Roy, Supriyo,Bose, Goutam Kumar,2020-09-18 In engineering there are often situations in which the material of the main component is unable to sustain long life or protect itself from adverse operating environments Moreover in some cases different material properties such as anti friction and wear anti corrosive thermal resistive super hydrophobic etc are required as per the operating conditions If those bulk components are made of such materials and possess those properties the cost will be very high In such cases a practical solution is surface coating which serves as a protective barrier to the bulk material from the adverse environment In the last decade with enormous effort researchers and scientists have developed suitable materials to overcome those unfavorable operating conditions and they have used advanced deposition techniques to enhance the adhesion and surface texturing of the coatings Advanced Surface Coating Techniques for Modern Industrial Applications is a highly sought reference source that compiles the recent research trends in these new and emerging surface coating materials deposition techniques properties of coated materials and their applications in various engineering and industrial fields The book particularly

focuses on 1 coating materials including anti corrosive materials and nanomaterials 2 coating methods including thermal spray and electroless disposition and 3 applications such as surface engineering and thin film application The book is ideal for engineers scientists researchers academicians and students working in fields like material science mechanical engineering tribology chemical and corrosion science bio medical engineering biomaterials and aerospace engineering
