Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1977 **Recording for the Blind & Dyslexic, ... Catalog of Books**, 1996 **Computer-assisted Investigative Reporting** Margaret H. DeFleur, 2013-11-26

Conducting computer analyses for the purposes of revealing information of significance to the press represents an extension of one of the most important forms of American journalism into the contemporary era of new technologies. Investigative reporting had its start with the establishment of the metropolitan newspaper during the early decades of the 1900s. At the time it was a continuation of the evolving tradition of freedom of the press that had characterized American political life since colonial times. As it developed, investigative reporting stressed facts rather than the opinions of the editor or reporter. In turn, that tradition had its own intellectual roots. Today, computer-assisted investigative reporting (CAIR) extends that marketplace of ideas into systematic examinations of the electronic records of government. In addition, computer analyses of other kinds of information systematically gathered by journalists can provide the press with insights into trends and patterns unlikely to be revealed by other means. This unique volume addresses procedures and issues in investigative journalism that have not been explained in other publications. It sets forth for the first time a detailed and specific methodology for conducting computer-assisted investigative analyses of both large and small scale electronic records of government and other agencies. That methodology consists of the logic of inquiry strategies for reaching valid conclusions and rules for reporting what has been revealed by the analyses to the public in clear ways. Such systematic methodologies are essential in social and other sciences and the development of a counterpart for investigative journalism has been badly needed. That systematic methodology is developed within a context that explains the origin and major characteristics of those elements that have come together in American society to make computer-assisted investigative reporting both possible and increasingly a part of standard newsroom practices. These include the development of traditional investigative journalism, the evolution of computer technology, the use of computers by government to keep records, the legal evolution of freedom of information laws, the rapid adoption of computers in newsrooms, the increasing importance of precision journalism, and the sharp increase in recent times of computer-assisted investigative reporting by American newspapers, both large and small. The issues addressed in this book are discussed in a very readable context with an abundance of examples and illustrations drawn from the real world of journalism as it is practiced daily in newsrooms around the country. Explanations of concepts, principles, and procedures are set forth in layperson's terms that require very little in the way of knowledge of computers or statistical methods. *Topics on Economics and Social Science* Barrington K. Brown, 2009-05-11

This manuscript consists of 16 research papers that were completed between the years 1982 and 2005, the analyses of which range from the purely theoretical to the empirical and extending to the more ideological and philosophical. In any case, the emphasis of each paper is upon creativity, with inventiveness and innovation being the essential elements. Part

two of this manuscript consists of a purely theoretical paper This paper presents a fresh approach to macroeconomic theory and policy Part Three consisting of empirically oriented projects employs unique variable and model specifications in order to verify existing theories in economics The first three papers in this part verifies the theories of bilateral monopoly and the employment effects of minimum wage legislation under conditions of competition monopsony and monopoly The next paper examines Caribbean economic integration and verifies the principle of comparative advantage The fifth paper in this part examines the relationship between market structure and rates of return The sixth paper in this part deals with the gaming industry The fourth part of this manuscript deals with the more ideological and philosophical aspects of economics and social science The first two papers in this part tend to emphasize laissez faire capitalism The third and last paper of this part begins to break with this tendency and thus serves as somewhat of an introduction to the fifth part of this manuscript The fifth part of this manuscript is much more interdisciplinary in nature compared to the earlier parts and deals with class conflict and extends to conflict in general The first paper presents the primary class conflict model and five additional papers follow The fifth paper while an empirical undertaking is included here because it is consistent with the general topic of this part of the manuscript

Giambattista Vico and the New Psychological Science Luca Tateo, 2017-07-05 Giambattista Vico 1668-1744 was an Italian philosopher rhetorician and historian As one of the great thinkers of the Enlightenment he exerted tremendous influence on the social sciences He was

the first to stress cultural and linguistic dimensions in the development of both the human mind and social institutions. Although his ideas on the relationship between mind and culture and his epistemology have inspired the work of many scholars in psychology, his sizeable influence has been scarcely acknowledged. The volume is organized in two sections. The first locates Vico in his historical context and in the landscape of contemporary human and social sciences. The second part presents those of Vico's concepts that seem promising for the development of a new way of looking at psychological phenomena. In the book's conclusion, Luca Tateo gathers the ideas of the volume's contributors to suggest future development of the psychological sciences. This book aims to show how Vico's insights can inspire future research in the psychological sciences. It collects multidisciplinary contributions of leading international scholars that draw upon the thought of this original thinker. Collectively, the contributors remind us of the legacy and continuing influence of this inspiring historical figure.
