Basic and advanced models are developed from the multilevel regression, MLM, and latent variable SEM traditions within one unified analytic framework for investigating hierarchical data. The authors provide examples using each modeling approach and also explore situations where alternative approaches may be more appropriate given the research goals. Numerous examples and exercises allow readers to test their understanding of the techniques presented. Changes to the new edition include the use of Mplus 7.2 for running the analyses, including the input and data files at www.routledge.com/9781848725522. Expanded discussion of MLM and SEM model building that outlines the steps taken in the process, the relevant Mplus syntax, and tips on how to evaluate the models.
