

INTRODUCTION:

Waves occur all over the natural world. Light, sound, radiation, water ripples, etc. all occur as wave phenomena. There are two main types of waves that are found in the physical world: transverse waves, and longitudinal waves. Wave phenomena abide by the same rules regardless of the media it is transmitted through – or in other words, there are not separate characteristics for light waves, or sound waves, or water ripples. Because of this we can investigate the characteristics of all waves using a coiled spring (Slinky).

TERMS:

- m- **MEDIUM:** the medium is the material that a wave is transmitted through. For example sound waves are transmitted through air, and water ripples are transmitted through water.
- m- **Transverse Wave:** a transverse wave is a wave in which the vibrational displacement occurs in a direction perpendicular to the motion of a wave.

- m- **LONGITUDINAL WAVE:** also known as a compression wave – a longitudinal wave is a wave in which the vibrational displacement occurs in the same direction as the motion of the wave.

- m- **PULSE:** a single disturbance in a media that moves along in a wave.
- m- **Wavelength:** the length of a single pulse.
- m- **Amplitude:** the maximum amount a disturbance is from a wave's rest position.
- m- **Frequency:** the rate at which wave pulses pass a point.

OBJECTIVE

The objective of this lab is to observe and investigate the basic characteristics of waves, using a coiled spring.
