1. GENERAL

1.01 This section outlines procedures required for the operation of the DMS-1 Digital Multiplex System. The information contained in this section is supplementary to the descriptive and maintenance practices.

1.02 *Reason for Retissue:* to add new and revised information.

1.03 The DMS-1 system normally operates automatically. The monitor and alarm circuits within the system detect and indicate any degradation in performance or any equipment failure. When the system is functioning correctly and all input signals are present, there are no visual or audible alarms. When the system detects trouble, office alarms, remote alarms, and equipment alarms are activated.

1.04 The indicators on the faceplates of the alarm circuit packs (Fig. 1 and 2) are used as a first step in fault location. The functions of these indicators are described in 363-2011-500.

1.05 Controls on the faceplates are used for adjustments, system testing, and fault location.

2. ALARMS

2.01 Most RCT alarms are displayed on the QPP420 ALM REM circuit pack (Fig. 1). The Remote Concentrator Terminal (RCT) alarms are also transmitted to the Control Concentrator Terminal (CCT) and displayed on the QPP421 ALARM OFFICE circuit pack together with CCT alarms. In addition to the centralized alarm display, failure of the initial or the backup circuit pack, where optional backup circuit packs are installed, is indicated by a light on the QPP431 SYS CONT and QPP426 RING GEN.
