Karen Kensek, Douglas Noble, 2014-05-02 The bright future and exciting possibilities of BIM Many architects and engineers regard BIM as a disruptive force changing the way building professionals design build and ultimately manage a built structure With its emphasis on continuing advances in BIM research teaching and practice Building Information Modeling

BIM in Current and Future Practice encourages readers to transform disruption to opportunity and challenges them to reconsider their preconceptions about BIM. Thought leaders from universities and professional practice composed essays exploring BIM's potential to improve the products and processes of architectural design including the structure and content of the tools themselves. These authors provide insights for assessing the current practice and research directions of BIM and speculate about its future. The twenty-six chapters are thematically grouped in six sections that present complementary and sometimes incompatible positions: Design Thinking and BIM, BIM Analytics, Comprehensive BIM Reasoning with BIM, Professional BIM, BIM Speculations. Together these authors provide stimulating ideas regarding new directions in building information modeling.

Modern Environmental Design Andrew Watts, 2022-08-22 Well being in a building depends on a number of factors. Visuals, ventilation, heat, cooling, and acoustics are all key. Its efficiency relates not only to the design of a building, it can also be optimized and automated using the latest technologies and innovative environmentally friendly low tech solutions. To build upon and add to the successful Modern Construction Handbook, Andrew Watts details innovative and established examples of interior design in Modern Environmental Design. These are presented with the aid of texts, drawings, and 3D renderings.

Modern Structural Design Andrew Watts, 2022-08-22 Newer buildings often have complex geometries. They require ample structural implementation of the architectural design which is often costlier than it should be. The right expertise is needed in order to choose a construction approach that is safe yet economical and fully adequate to the design demands. In a continuation of Modern Construction Case Studies which focused on complex preliminary design, Modern Structural Design presents illustrative case studies of how complex innovative construction systems have been successfully implemented. They are presented with the aid of texts, drawings, and 3D renderings.
