

Table 1. Guide to the Dissection of a Bony Fish

1. Place fish on a tray and observe its external anatomy. Identify the different fins. Also identify other external structures (eyes, lips, nostrils/nares, operculum, gills, lateral line). Peel off some scales and look at it up close.
2. Locate the anus. Begin by inserting a fine scalpel blade or dissecting scissors into the anus (also called the **vent**) of the fish. The anus is located just anterior to (in front of) the anal fin, on the ventral (lower) side of the fish in most fishes.
3. Cut/Make an incision extending anteriorly along the fish's belly towards the head. Cut between the pelvic fins then forward until you reach the narrow, fleshy space beneath the head and between the gill covers.
4. On the left side of the fish's body, cut a vertical line behind the gills, starting from the initial incision on the ventral midline then upwards. Do the same on the posterior end but cut from the anus then upwards. Carefully lift the flesh to expose the ribs of the fish and some internal organs.
5. Tract the digestive system either starting from the mouth or from the anus. Located the **stomach (fish-like organ)**. Locate the **intestines**, and remove it and stretch it out on the tray. Cut open the stomach to see what the fish last ate.
6. Locate the **heart**. It is located near the pectoral fins or below the gills and is dark red in colour with coagulated blood. If the fish's heart is large enough, you may be able to dissect it to see the **2 chambers inside** (upper chamber is **atrium**, lower chamber is **ventricle**).
7. Locate the **liver**. It is the largest organ in the fish. It is red in color.
8. Locate the **swim bladder**. It is a membranous sac located at the most dorsal area behind the ribs and just beneath the vertebral column. This is filled with air and is responsible in maintaining the fish's buoyancy. This is only found in bony fishes (not present in sharks).
9. Pull behind the head and carefully cut off the **operculum** to expose the **gills** (fan/feathery-like). The **gill filaments** are full of capillaries to be able to extract more oxygen from water.
10. Remove the translucent covering of the **eyes**. Using tweezers, you can find the lens on the pupil, which is almost a perfect sphere.
11. Determine if your fish is male or female. **Males** will have 2 large sacs towards their rear. **Females** will have 1 sac, sometimes filled with eggs.
