

# POWER TRANSMISSION

## 40 GENERAL

### 400 General, common info about 410 - 436

#### General description

Power from the engine is transferred hydraulically and mechanically to the wheels through the transmission (1), via a torque converter that adapts the output torque to the required torque and on to the drive axles (2, 3).

The hydraulic transmission is of type HTE.

HTE is a hydromechanical four-speed transmission (Power Shift) with torque converter, spur gears and hydraulically operated disc clutch.

It has four forward and four reverse gears.

The designation E signifies that the transmission has a gear selector valve with gearshifting solenoids of PWM-controlled proportional valves. (Pulse Width Modulated). This means that V—ECU emits a pulsating direct voltage at a constant frequency, but variable length of the voltage pulses.

The drive axles have floating drive shafts and planetary gear hub reductions with integrated oil-cooled disc brakes. Each axle has an oil space shared by the hub reductions, brake discs and final drive.
