

Probability and Inheritance (continued)**34**

- b. Calculate the percent of the total that each combination (heads-heads, heads-tails, or tails-tails) occurred and record it in the proper column. To find the percent, divide each observed number by 40 and multiply by 100.

According to the law of probability, when there are four equally likely outcomes from a procedure, the probability that one of the outcomes will occur is $1/4$ or 25%. We can see how this is calculated. For example, we know that in tossing two pennies, the probability of heads occurring on one penny is $1/2$. The probability of heads occurring on the other penny is also $1/2$. The probability of heads occurring on both pennies in one toss is $1/2 \times 1/2 = 1/4$.

2. Using the law of probability, predict the expected outcomes of tossing two pennies.
- Record the expected numbers in the proper column in Table 2.
 - Calculate the percent of the total that each combination is expected to occur, as you did above (problem 1-b). Enter these numbers in the proper column.
 - Calculate the deviation by subtracting the expected from the observed and enter your results in Table 2.

Table 2. Probability of Independent Events Occurring Simultaneously

Combinations	Observed	%	Expected	%	Deviation
Heads Heads					
Heads Tails Tails Heads					
Tails Tails					
Total	40	100%	40	100%	

PART III. PROBABILITY AND MENDELIAN GENETICS

We can use the law of probability to predict the probability of given genetic traits appearing in the offspring of particular parents. Punnett squares can also be used to make these predictions.

When gametes are formed, the pair of genes that determine a particular trait separate, and one gene goes to each gamete. When fertilization occurs, a male and a female gamete fuse. The resulting zygote, which develops into the new individual, now contains two genes for the trait. Which two of the parents' genes appear in the zygote is a result of chance.

In this case we will consider the inheritance in pea plants of round and wrinkled peas. *R* will represent the dominant gene for round peas and *r* will represent the recessive gene for wrinkled peas.

In Pursuit of the Gene James Schwartz, 2010-03-30 The mystery of inheritance has captivated thinkers since antiquity and the unlocking of this mystery the development of classical genetics is one of humanity's greatest achievements This great scientific and human drama is the story told fully and for the first time in this book Acclaimed science writer James Schwartz presents the history of genetics through the eyes of a dozen or so central players beginning with Charles Darwin and ending with Nobel laureate Hermann J Muller In tracing the emerging idea of the gene Schwartz deconstructs many often told stories that were meant to reflect glory on the participants and finds that the official version of discovery often hides a far more complex and illuminating narrative The discovery of the structure of DNA and the more recent advances in genome science represent the culmination of one hundred years of concentrated inquiry into the nature of the gene Schwartz's multifaceted training as a mathematician geneticist and writer enables him to provide a remarkably lucid account of the development of the central ideas about heredity and at the same time bring to life the brilliant and often eccentric individuals who shaped these ideas In the spirit of the late Stephen Jay Gould this book offers a thoroughly engaging story about one of the oldest and most controversial fields of scientific inquiry It offers readers the background they need to understand the latest findings in genetics and those still to come in the search for the genetic basis of complex diseases and traits Cumulated Index Medicus, 1972
