

Lab 53: Fertilization and Early Development

Introduction

Fertilization is the process by which the nuclei of an egg and a sperm cell fuse together to form a new cell, the zygote. This process is essential for the development of a new organism.

In sexually reproducing organisms, the egg and sperm cells are produced by meiosis, a process that results in the formation of haploid cells. These cells then fuse during fertilization to form a diploid zygote. The zygote then undergoes cleavage, a series of cell divisions that result in the formation of a blastocyst, which is the early stage of development.

During the fertilization process, the egg and sperm cells fuse to form a zygote. The zygote then undergoes cleavage, a series of cell divisions that result in the formation of a blastocyst, which is the early stage of development.

Purpose

The purpose of this lab is to observe the process of fertilization and to describe the early stages of development.

Objectives

1. Describe the process and components of fertilization.
2. Describe and illustrate the early stages of development.

Atlas of Human Embryo Development Nicolas Plachta, Stephanie Bissiere, 2025-08-21 This important and exciting atlas shows with unprecedented resolution the development of the human embryo from fertilization to the end of pre implantation development Technology can now capture dynamic changes at the subcellular level that drive embryogenesis and development allowing the whole team in reproductive medicine to move on from traditional imaging of fixed specimens or classic light microscopy to seeing as if in 3D and real time the process of fertilization and development of the human embryo and of developmental defects The human embryo research documented here will be of paramount importance for reproductive health offering the chance to advance fertility treatments genetic disease prevention and our understanding of early human development

Phenology: An Integrative Environmental Science Mark D. Schwartz, 2011-04-28 Phenology is the study of plant and animal life cycle events which are triggered by environmental changes especially temperature Wide ranges of phenomena are included from first openings of leaf and flower buds to insect hatchings and return of birds Each one gives a ready measure of the environment as viewed by the associated organism Thus phenological events are ideal indicators of the impact of local and global changes in weather and climate on the earth's biosphere Assessing our changing world is a complex task that requires close cooperation from experts in biology climatology ecology geography oceanography remote sensing and other areas This book is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists students and interested members of the public With contributions from a diverse group of over fifty phenological experts covering data collection current research methods and applications it demonstrates the accomplishments and potential of phenology as an integrative environmental science
