

GENERAL BIOLOGY
NON-MENDELIAN PATTERNS OF INHERITANCE

- I. Read the situations carefully and answer what is/are needed.
- a. Suppose in a species of plants, the blue and red flower colors are not completely dominant with each other. The blue male and red female are crossed with one another.
1. What is the genotype of the male?
➤ I used BB for blue male.
 2. What is the genotype of the female?
➤ I used bb for red female.
 3. How will the Punnett square look like?
➤ It will look like a monohybrid cross with four squares for their offspring's possible genotypes. The parents are both homozygous (BB for male, bb for female), so the genotypes of their offspring are all heterozygous (Bb). But the parents are not completely dominant with each other; therefore, this is an example of Incomplete dominance.

	B	B
b	Bb	Bb
b	Bb	Bb

4. What is/are the genotype(s) of the offsprings?
➤ They all have Bb as their genotype.
5. What is/are the phenotype(s) of the offsprings?
➤ Their phenotype will be magenta.
