Designing Embedded Systems with PIC Microcontrollers Tim Wilmshurst,2006-10-24 *Embedded Systems with PIC Microcontrollers Principles and Applications* is a hands on introduction to the principles and practice of embedded system design using the PIC microcontroller Packed with helpful examples and illustrations the book provides an in depth treatment of microcontroller design as well as programming in both assembly language and C along with advanced topics such as techniques of connectivity and networking and real time operating systems In this one book students get all they need to know to be highly proficient at embedded systems design This text combines embedded systems principles with applications using the 16F84A 16F873A and the 18F242 PIC microcontrollers Students learn how to apply the principles using a multitude of sample designs and design ideas including a robot in the form of an autonomous guide vehicle Coverage between software and hardware is fully balanced with full presentation given to microcontroller design and software programming using both assembler and C The book is accompanied by a companion website containing copies of all programs and software tools used in the text and a student version of the C compiler This textbook will be ideal for introductory courses and lab based courses on embedded systems microprocessors using the PIC microcontroller as well as more advanced courses which use the 18F series and teach C programming in an embedded environment Engineers in industry and informed hobbyists will also find this book a valuable resource when designing and implementing both simple and sophisticated embedded systems using the PIC microcontroller Gain the knowledge and skills required for developing today's embedded systems through use of the PIC microcontroller Explore in detail the 16F84A 16F873A and 18F242 microcontrollers as examples of the wider PIC family Learn how to program in Assembler and C Work through sample designs and design ideas including a robot in the form of an autonomous guided vehicle Accompanied by a CD ROM containing copies of all programs and software tools used in the text and a student version of the C compiler

PIC Experiments Lab Book with PIC18F2431 and XC8 Innocent Ejoro Okoloko,2020-09-26 The book is a collection of experiments using a single advanced 8 bit microcontroller from Microchip R the PIC18F2431 The language used is XC8 free from Microchip R and there is no theoretical burden The programming

environment used is MPLAB X also free from Microchip R The book is intended for use in companion with a theoretical reading course on embedded systems or similar course along with the PIC18F2431 datasheet Microchip document DS39616D and all other datasheets that are included in each experiment which should be used as reference guides With the datasheet of any other processor different from the PIC18F2431 the book can also be used with that PIC microcontroller All one needs to do is to look for the similar pinouts and ports in the datasheet of the other microcontroller and follow the examples in this book So the knowledge gained here can be applied to other PIC microcontrollers with a little more effort This book is a sequel to my first experiments lab book PIC EXPERIMENTS LAB BOOK USING PIC16F877A and XC8 The previous book contained 29 Experiments this book contains 56 Experiments I observed that a required LCD header file CHARACTER_MAP.h was omitted by error in the previous book This book includes not only the CHARACTER_MAP.h but also a complete LCD library header file SUNPLUSLCD.h which uses the CHARACTER_MAP.h Moreover a new USART library file UART.h has been included All the experiments implementing USART with RS232 have been replicated using Bluetooth and even more experiments on Bluetooth are added This is because it is more convenient and economical to implement serial communication using Bluetooth than RS232 as long as the environment is not too noisy Other new experiments are FTDI232 SPI SONAR temperature sensor temperature controlled fan relay signal processing using drone radio transmitter and receiver multichannel ADC brushless DC motor BLDC ESC bipolar stepper full step 1 phase and 2 phase bipolar half step and a light seeking robot In addition all codes are printed with the full MPLAB X colour for readability and understanding The diagrams have been redrawn and posted as high quality svg images in full colour Two new chapters Power supply and Equipment and tools have been included A section on troubleshooting has also been included after every similar experiment Future editions will include more experiments and projects

Forthcoming Books Rose Arny,2002-02 LabVIEW Riccardo de Asmundis,2021-07-28 The LabVIEW software environment from National Instruments is used by engineers and scientists worldwide for a variety of applications This book examines many of these applications including modeling data acquisition monitoring electrical networks studying the structural response of buildings to earthquakes and more
