

Firefly Unit Study

Adult firefly

When the metamorphosis is complete, the adult firefly is ready to emerge. They only live in this stage for a few weeks. Their only mission now is to mate. Fireflies flash to find a mate, using a species-specific pattern to locate compatible individuals.

Egg

The firefly life cycle begins with an egg. The mated females lay 100-200 eggs in midsummer in the grass or on the ground. These eggs glow. Firefly eggs usually hatch in three to four weeks.

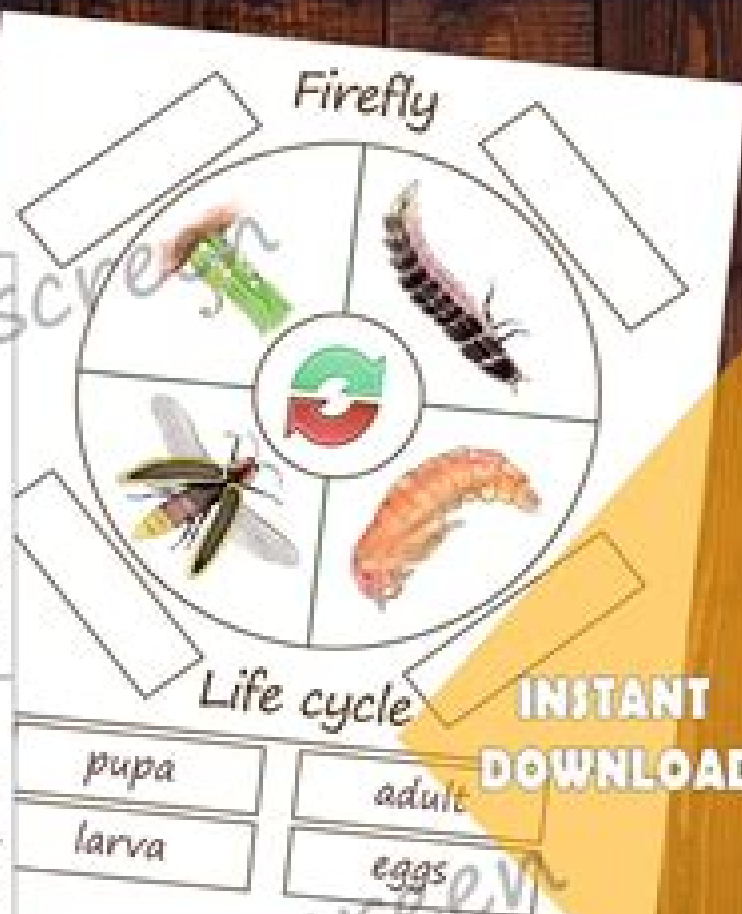

Pupa

In late spring the larva is ready to pupate. The larva forms a protective covering as it changes into an awesome firefly. This process takes about 2 weeks either underground or on a tree branch.

Larva

Egg hatch occurs by late summer and the larvae are present until the following spring. The dorsal segments look like overlapping plates. The underside of the larva is round and creamy white. They have six legs. Firefly larvae that also called glowworms, produced light. As it grows, the larva will repeatedly molt to shed its exoskeleton, each time replacing it with a larger one.
