Neural Basis of Motivational and Cognitive Control Rogier B. Mars, 2011 A multidisciplinary overview of key approaches in the study of cognitive control and decision making

Biosonar Annemarie Surlykke, Paul E. Nachtigall, Richard R. Fay, Arthur N. Popper, 2014-07-19 Two groups of animals bats and odontocetes toothed whales have independently developed the ability to orient and detect prey by biosonar echolocation This active mechanism of orientation allows these animals to operate under low light conditions Biosonar is a conceptual overview of what is known about biosonar in bats and odontocetes Chapters are written by bat and odontocetes experts resulting in collaborations that not only examine data on both animals but also compare and contrast mechanisms This book provides a unique insight that will help improve our understanding of biosonar in both animal groups

Building up the inhibitory synapse Enrico Cherubini, Fast inhibitory transmission exerts a powerful control on neuronal excitability and network oscillations thought to be associated with high cognitive functions An alteration of inhibitory signaling is associated with major neurological and psychiatric disorders including epilepsy Once released from presynaptic nerve terminals GABA and glycine cross the synaptic cleft and bind to postsynaptic receptors localized in precise apposition to presynaptic release sites The functional organization of inhibitory synapses consists in a dynamic process which relies on a number of highly specialized proteins that ensure the correct targeting clustering stabilization and subsequent fate of synaptic receptors Among the proteins involved in this task the tubulin binding protein gephyrin plays a crucial role Through its self oligomerization properties this protein forms hexagonal lattices that trap GABAA and glycine receptors and link them to the cytoskeleton By directly interacting with cell adhesion molecules of the neuroligin/neurexin families that connect presynaptic and postsynaptic neurons at synapses gephyrin ensures a backward control of presynaptic signaling In addition changes in clusters size is dynamically regulated by lateral diffusion of neurotransmitter receptors between the synaptic and extrasynaptic compartments and by their interaction with synaptic scaffold proteins The aim of this Research Topic research articles and reviews is to bring together experts on the cellular and molecular mechanisms regulating the appropriate assembly location and function of pre and postsynaptic specializations at inhibitory synapses A particular emphasis will be on the role of receptor trafficking in synaptic stabilization and plasticity
