Intermolecular Forces Lab Worksheet - Answer Key

Directions: Today you will complete two experiments that compare the properties of water to isopropanol (a type of rubbing alcohol). Before conducting each experiment, you will first read about the experiment and then make a prediction about what you think will happen. Afterward you do the experiment, you will write an explanation of what was happening at the atomic level that let us observe these properties.

Introduction: In many ways, water is a miracle liquid. It is essential for all living things on earth and it is often referred to as a universal solvent because many substances dissolve in it. Water displays unusual properties due to the ways the individual water molecules interact with each other.

1. Draw the structural formula (with lone pairs) for the two molecules we will be comparing today, water (H_2O) and isopropanol ($\text{C}_3\text{H}_7\text{O}$). Draw a dipole arrow to show the direction the electrons are being pulled and label the areas of partial positive and negative charges.

H_2O

or

$\text{C}_3\text{H}_7\text{O}$

Note: the bond between C and H is NOT POLAR. Do not draw dipole arrows or partial charges for those bonds.

2. Which molecule is more polar? water

Experiment #1: Penny

How many drops of water fit on the head of a penny? How many drops of isopropanol fit on the head of a penny?

Prediction:

- a. I think _____ drops of water will fit on the head of the penny because _____

as well as mechanics of contacting surfaces and their topography It begins by introducing the reader to the importance of tribology in everyday life and offers a brief history of the subject It then describes the nature of rough surfaces and the mechanics of contacting elastic solids and their deformation under load and friction in their relative motion The book goes on to discuss the importance of lubricant rheology with respect to viscosity and density Then the principles of hydrodynamic lubrication are covered with derivations of the governing Reynolds and energy equations Applications of hydrodynamic lubrication in various forms of bearings journal bearings thrust bearings and externally pressurised bearings are outlined The important and still evolving subject of elastohydrodynamic lubrication is treated in some detail both at its fundamentals and its applications in thin shell or overlay bearings cam followers and internal combustion engine pistons The fundamentals of biotribology are also covered particularly its applications to endo articular mammalian joints such as hip and knee joints and their arthroplasty In addition there is a treatment of the rapidly emerging knowledge of tribological phenomena in lightly loaded vanishing conjunctions nanotribology in natural systems and very small devices such as MEMS and high density data storage media There is also a new chapter on the rapidly emerging subject of surface texturing to promote retention of microreservoirs of lubricant acting as microbearings and improving lubrication of otherwise poorly lubricated conjunctions This book targets the undergraduate and postgraduate body as well as engineering professionals in industry where often a quick solution or understanding of certain tribological fundamentals is sought The book can also form an initial basis for those interested in research into certain aspects of tribology
