

6. If the CDI unit is found to be faulty as a result of these tests, it must be replaced. No repairs are possible, in spite of technicians trying to obtain a good second-hand unit from a motorcycle breaker, in view of the cost of a new unit.

7. Generator ignition source and pulser coil: testing

1. Both tests are essential on the generator system. To remove and refit the generator refer to the instructions given in Chapter 1, Section 2 and 32 respectively. The plates at the rear foot will be required to remove the generator cover and plates at the rear foot.

2. To test the rotor, remove and refer the test, then remove the eye screws and the fan head and rear body cover. See Chapter 4, Section 15. The main generator rotor can be tested by the coil testing by two multi-point connections which are provided for a black and brown for the rotor, for being able to check the rotor. The generator unit has a pulser coil. Disconnect the rotor for the test to be tested, the generator.

3. Using a multimeter set to the $\times 1$ ohm-resistance range, measure the resistance between a good earth point on the engine/transmission unit and the pulser coil (the wire which leads to the CDI).

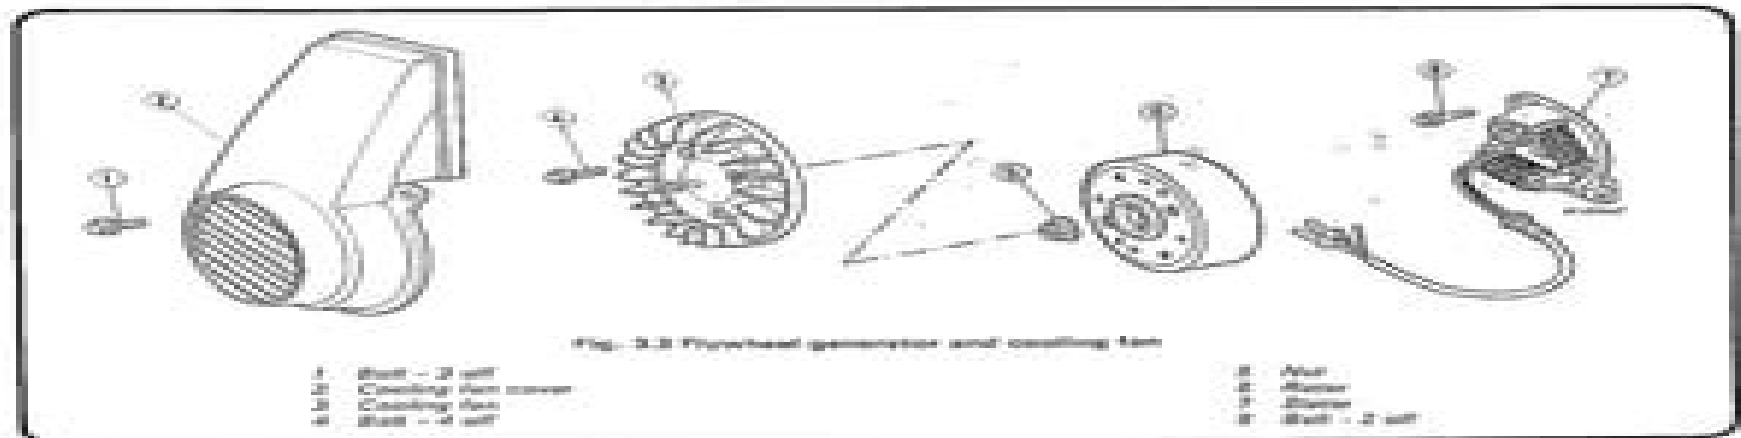

4. The test of resistance will read very low resistance depending on the design of the engine used and will vary between 0.5 and 1 ohm. The resistance should be significantly less than specified. The test should be repeated twice, particularly if the meter registers a short-circuit (no resistance) or an open circuit (infinity, or very high resistance).

5. If a test is thought to be faulty, first check that this is not due to a damaged or broken wire from the test lead to the pulser coil, or that the generator lead wires are actually connected to the correct points on the generator.

6. If the test itself appears to be faulty, ask the advice of a good authorized service dealer or engine expert. You can obtain the test and check your findings. If the test is faulty then the only available, or service, repair replacement parts, as part of the generator unit assembly, this is likely to prove expensive. Several generators are regularly available and an existing service to the national motorcycle
