Handbook of Emotion Elicitation and Assessment James A. Coan, John J.B. Allen, 2007-04-19 Emotion research has become a mature branch of psychology with its own standardized measures induction procedures data analysis challenges and sub disciplines During the last decade a number of books addressing major questions in the study of emotion have been published in response to a rapidly increasing demand that has been fueled by an increasing number of psychologists whose research either focus on or involve the study of emotion Very few of these books however have presented an explicit discussion of the tools for conducting research despite the facts that the study of emotion frequently requires highly specialized procedures instruments and coding strategies and that the field has reached a place where a large number of excellent elicitation procedures and assessment instruments have been developed and validated Emotion Elicitation and Assessment corrects this oversight in the literature by organizing and detailing all the major approaches and instruments for the study of emotion It is the most complete reference for methods and resources in the field and will serve as a pragmatic resource for emotion researchers by providing easy access to a host of scales stimuli coding systems assessment tools and innovative methodologies This handbook will help to advance research in emotion by encouraging researchers to take greater advantage of standard and well researched approaches which will increase both the productivity in the field and the speed and accuracy with which research can be communicated

Natural Language Processing and Information Systems Christina J Hopfe, Yacine Rezgui, Elisabeth Métais, Alun Preece, Haijiang Li, 2010-06-20 The 15 International Conference on Applications of Natural Language to Information Systems NLDB 2010 took place during June 23-25 in Cardiff UK Since the first edition in 1995 the NLDB conference has been aiming at bringing together researchers people working in industry and

potential users interested in various applications of natural language in the database and information system area. However, in order to reflect the growing importance of accessing information from a diverse collection of sources, Web Databases, Sensors, Cloud, in an equally wide range of contexts, including mobile and tethered, was the theme of the 15th International Conference on Applications of Natural Language to Information Systems 2010, "Communicating with Anything Anywhere in Natural Language." Natural languages and databases are core components in the development of information systems. Natural language processing (NLP) techniques may substantially enhance most phases of the information system lifecycle, starting with requirement analysis, specification, and validation, and going up to conflict resolution, result processing, and presentation. Furthermore, natural language-based query languages and user interfaces facilitate the access to information for all and allow for new paradigms in the usage of computerized services. Hot topics such as information retrieval, IR software engineering, applications, hidden Markov models, natural language interfaces, and semantic networks and graphs imply a complete fusion of databases, IR, and NLP techniques.
