Stroud, 2011 *Dynamical Systems with Applications using MAPLE* Stephen Lynch, 2013-11-11 This book provides an introduction to the theory of dynamical systems with the aid of the Maple algebraic manipulation package It is written for both senior undergraduate and first year graduate students The first half of the book deals with continuous systems using ordinary differential equations Chapters 1-12 and the second half is devoted to the study of discrete dynamical systems Chapters 13-20 The author has gone for breadth of coverage rather than fine detail and theorems with proof are kept at a minimum The material is not clouded by functional analytic and group theoretical definitions and so is intelligible to readers with a general mathematical background Some of the topics covered are scarcely covered elsewhere Most of the material in Chapters 9-12-16-17-19 and 20 is at postgraduate level and has been influenced by the author's own research interests It has been found that these chapters are especially useful as reference material for senior undergraduate project work The book has a very hands on approach and takes the

reader from the basic theory right through to recently published research material **Accurate Visual Metrology from Single and Multiple Uncalibrated Images** Antonio Criminisi,2012-09-10 Accurate Visual Metrology from Single and Multiple Uncalibrated Images presents novel techniques for constructing three dimensional models from bi dimensional images using virtual reality tools Antonio Criminisi develops the mathematical theory of computing world measurements from single images and builds up a hierarchy of novel flexible techniques to make measurements and reconstruct three dimensional scenes from uncalibrated images paying particular attention to the accuracy of the reconstruction This book includes examples of interesting viable applications eg Forensic Science History of Art Virtual Reality Architectural and indoor measurements presented in a simple way accompanied by pictures diagrams and plenty of worked examples to help the reader understand and implement the algorithms Research Perspectives on Dynamic Translinear and Log-Domain Circuits Wouter A. Serdijn,Jan Mulder,2013-06-29 The area of analog integrated circuits is facing some serious challenges due to the ongoing trends towards low supply voltages low power consumption and high frequency operation The situation is becoming even more complicated by the fact that many transfer functions have to be tunable or controllable A promising approach to facing these challenges is given by the class of dynamic translinear circuits which are as a consequence receiving increasing interest Several different names are used in literature log domain exponential state space current mode companding instantaneous companding tanh domain sinh domain polynomial state space square root domain and translinear filters In fact all these groups are overlapping subclasses of the overall class of dynamic translinear circuits Research Perspectives on Dynamic Translinear and Log Domain Circuits is a compilation of research findings in this growing field It comprises ten contributions coming from recognized dynamic translinear researchers in Europe and North America Research Perspectives on Dynamic Translinear and Log Domain Circuits is an edited volume of original research **Mathematics for Engineers III** Gerd Baumann,2011-12-15 This book is part of a four volume textbook on Engineering Mathematics for undergraduates Volume III treats vector calculus and differential equations of higher order The text uses Mathematica as a tool to discuss and to solve examples from mathematics The basic use of this language is demonstrated by examples *Matematika U/teknik Jl. 1/5* , The British Library General Catalogue of Printed Books 1976 to 1982 British Library,1983 Structural Mechanics Ray Hulse,Jack Cain,2018-03-06 This second edition of Structural Mechanics is an expanded and revised successor to the highly successful first edition which over the last ten years has become a widely adopted standard first year text The addition of five new programmes together with some updating of the original text now means that this book covers most of the principles of structural mechanics taught in the first and second years of civil engineering degree courses Suitable for independent study or as a compliment to a traditional lecture based course Adopts a programmed learning format with a focus on student centred learning Contains many examples carefully constructed questions and graded practical problems allowing the reader to work at their own pace and assess their progress whilst
