Motor Control Translating Research Into Clinical Applications:

Motor Control Anne Shumway-Cook, Marjorie H. Woollacott, 2007 *Motor Control* is the only text to bridge the gap between current motor control research and its applications to clinical practice. The text prepares therapists to examine and treat patients with problems related to balance, mobility, and upper extremity function based on the best available evidence supporting clinical practice. The Third Edition features a new two-color design with an updated art program. This edition provides the latest research findings and their clinical applications in postural control, mobility, and upper extremity function. Drawings, charts, tables, and photographs are also included to clarify postural control and functional mobility and laboratory activities, and case studies are provided to reinforce key concepts. *Motor Control* Anne Shumway-Cook, Marjorie H.

Woollacott, Jaya Rachwani, Victor Santamaria, 2023-04-05 *Motor Control Translating Research into Clinical Practice* 6th Edition is the only text that bridges the gap between current and emerging motor control research and its application to clinical practice. Person-Centered Outcome Metrology William P. Fisher, Jr., Stefan J. Cano, 2022-12-02 This unique collection of chapters from world experts on person centered outcome PCO measures addresses the following critical questions Can individual experiences be represented in measurements that do not reduce unique differences to meaningless uniformity How person centric are PCO measures Are PCO measurements capable of delivering the kind of quality assured quantification required for high stakes decision making Are PCO measures likely to support improved health care delivery Have pivotal clinical studies failed to deliver treatments for diseases because of shortcomings in the PCO measures used Are these shortcomings primarily matters of precision and meaningfulness Or is the lack of common languages for communicating outcomes also debilitating to quality improvement research and the health care economy Three key issues form an urgent basis for further investigation First the numbers generated by PCO measures are increasingly used as the central dependent variables upon which high stakes decisions are made The rising profile of PCO measures places new demands for higher quality information from scale and test construction evaluation selection and interpretation Second PCO measurement science has well established lessons to be learned from those who have built and established the science over many decades Finally the goal in making a PCO measurement is to inform outcome management As such it is vitally important that key stakeholders understand that over the last half century developments in psychometrics have refocused measurement on illuminating clinically important individual differences in the context of widely reproduced patterns of variation in health and functioning comparable scale values for quality improvement and practical explanatory models This book s audience includes anyone interested in person centered care including healthcare researchers and practitioners policy makers pharmaceutical industry representatives clinicians patient advocates and metrologists This is an open access book

Perceiving and Acting in the Real World: From Neural Activity to Behavior Simona Monaco, Gavin Buckingham, Irene Sperandio, J. Douglas Crawford, 2016-12-07 One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate

such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies
