Pagán, 2014-03-18 Planarians a class of flatworm are extraordinary they possess the remarkable ability to regenerate lost body parts including complete regeneration of the nervous system If cut into pieces each piece of the planarian can regenerate into a complete organism They are also unique among invertebrates in that they display addiction like behaviors to many drugs abused by humans Because of these distinct neurological traits the planarian is often used as an animal model in neurological research being used most recently for developments in neuropharmacology *The First Brain* is a discussion of how planarians have been used in neuropharmacology and what role they have played in scientific developments that have a high impact on our culture Planarians have been the animal models for research in drug addiction antidepressant development and various other topics in biology neurobiology and even zoology Pagán uses these flatworms as a framework to explore the history of biological research The book provides accessible background information on how biomedical research is impacted by evolution and defines neurobiology and neuropharmacology in ways that are easy to understand At the same time Pagán provides enough detail for the book to be useful for scientists working in various subsections of biology The planarian has played a key role in the history biological neuropharmacological and zoological research and has even made appearances in a few unexpected places in popular culture On Pagán explores all these roles and shows us why the planarian truly is one of the most extraordinary and influential organisms in scientific research today **Drunk Flies and Stoned**

Dolphins One R. Pagan, 2021-11-16 From the cup of coffee that jumpstarts the day to dangerously addictive drugs the recreational use of plants with psychoactive properties has a long history among humans But as with many things it turns out that other animals got there first From parrots to primates consuming medicinal chemicals is an instinctive behavior that helps countless organisms fight infection and treat disease But the similarities don't end there Like us many creatures also consume substances that have no apparent benefit except for inducing intoxication In fact animals have been using drugs for recreational purposes since prehistoric times We may even have animals to thank for the idea legend says that coffee was

discovered by observing the behavior of goats that had eaten it In his previous book *Strange Survivors* author and biologist R Pag n introduced readers to some of the truly bizarre strategies animals use to survive in the cutthroat world of natural selection Now in *Drunk Flies and Stoned Dolphins* he sheds light on the surprising cravings they indulge when it s time to unwind In this book you ll get an eye opening glimpse into the mind altering behavior of the non human members of the animal kingdom spanning insects to elephants including the dolphin species that apparently likes to pass around an intoxicating pufferfish as if they were sharing a joint Combining fascinating science with humor and enthusiasm Pag n s latest is full of the kind of unforgettable stories and odd facts that you ll find yourself repeating to everyone you meet From fruit fly happy hour to the evolutionary reasons behind nature s drugs *Drunk Flies and Stoned Dolphins* takes you on a trip through the colorful world of animal intoxication and along the way explores what this science reveals about the surprising connections between all the world s creatures

How to Make a Tornado New Scientist, 2016-09-01 Science tells us grand things about the universe how fast light travels and why stones fall to earth But scientific endeavour goes far beyond these obvious foundations There are some fields we don t often hear about because they are so specialised or turn out to be dead ends Yet researchers have given hallucinogenic drugs to blind people seriously tried to weigh the soul as it departs the body and planned to blast a new Panama Canal with atomic weapons Real scientific breakthroughs sometimes come out of the most surprising and unpromising work *How to Make a Tornado* is about the margins of science not the research down tried and tested routes but some of its zanier and more brilliant by ways Investigating everything from what it s like to die to exploding trousers and recycled urine this book is a reminder that science is intensely creative and often very amusing and when their minds run free scientists can fire the imagination like nobody else

El "científico loco" Luigi Garlaschelli, Alessandra Carrer, 2019-01-31 La literatura primero pero también el cine y el cómic han hecho de la figura del científico loco un estereotipo que reconocemos con facilidad Sin embargo como todos los estereotipos se funda en una amalgama de imaginaciones y habladas provenientes de personajes y hechos reales que les dieron pie Nacido con la ciencia moderna se nutre desde el siglo XVIII de centenares de personajes y experimentos a veces peligrosos a veces geniales a veces ridículos que motivados siempre por el deseo de conocer de comprender de saber han transitado de forma arriesgada zonas vidriosas limitadas con la tica con las convenciones al uso y con la ortodoxia con suerte desigual Petrificadores resucitadores pesadores de almas trasplantadores lobotomizadores experimentadores de drogas y otros hallan espacio en estas páginas que dan acceso a unos de los capítulos más llamativos y provocadores de la historia de la ciencia
