*Settlements and Generative Urbanism* analyzes two informal housing settlements in Istanbul Turkey Karanfilk y and Fatih Sultan Mehmet to examine how generatively built structures and neighbourhoods can be successfully realized in a modern burgeoning urban context Generative development processes adapt to existing conditions and unfold over time but there have been relatively few examples in the 20th and 21st centuries This book evaluates the constructs of living structures

pattern languages and generative urban design processes in relation to Istanbul's informal settlements. It provides examples of communities making liveable, dynamic and user-adapted neighbourhoods and establishes them as a modern settlement typology in generative urban design theory.

**Urban Maps** Richard Brook, Nick Dunn, 2016-12-05 This book concerns the city and the devices that define the urban environment by their presence, representation or interpretation. The texts offer an interdisciplinary discourse and critique of the complex systems, artifacts, interventions and evidences that can inform our understanding of urban territories on surfaces in the margins or within voids. The diverse media of arts practices as well as commercial branding are used to explore narratives that reveal latent characteristics of urban situations that conventional architectural inquiry is unable to do. The subjects covered are presented within a wider framework of urban theory into which are embedded case study examples that outline the practices, processes and interpretations of each theme. The chapters provide a contemporary reading of urban socio-cultural conditions using mapping as a lens to explore and communicate the social phenomena and lived experiences of the dynamic and temporal city. Mapping is developed as a form of critical instrumentality to expose, record and contribute to the understanding of the singular essences of space, place and networks by thematic, cognitive and experiential modes of investigation.

*Transitioning to Sustainable Cities and Communities* Hubert Klumpner, Klearjos Eduardo Papanicolaou, Georgeen Theodore, 2024-11-14 In developing alternative approaches to urban development in response to the societal challenge of living in ever-expanding cities, this Volume on the SDG11 Sustainable Cities and Communities proposes the concept of an Urbanising Earth. We question the dominant model of Western cities and their resultant global warming leading to the replacement of natural environments with artificial ones. The Volume features over twenty practical and metaphorical cases from experienced practitioners to emerging design thinkers, each of whom offer interconnected reflections on the research, design and implementation of projects anchored in architecture and design arguments promoting a more balanced view of the built and natural environment. These reflections, designed to engage readers, highlight the collective effort needed for sustainable urban development. The Volume aims to facilitate design as a learning process for society to reconcile human and environmental rights while celebrating the art of cultivating and living in this urban age. The right to education and housing can create synergies providing parks and public spaces to underprivileged neighbourhoods. The overall aim is to connect thinking with actions while considering what modernism in architecture and urban planning is today. In doing this, the Volume sheds light on the condition of contemporary design itself. We draw from limitless approaches to the fundamental challenges and critical discussions presented to us by this Urbanising Earth.

**Routledge Handbook of Sustainable Design** Rachel Beth Egenhoefer, 2017-07-28 The Routledge Handbook of Sustainable Design considers the design not only of artifacts but of structures, systems and interactions that bear our decisions and identities in the context of sustaining our shared planet. In addressing issues of design for global impact, behavior change, systems and strategy, ethics and values, this handbook presents a unique and

powerful design perspective Just as there are multiple definitions of design so there are several definitions of sustainability making it difficult to find unity The term can sometimes be seen as a goal to achieve or a characteristic to check off on a list of criteria In actuality we will never finish being sustainable We must instead always strive to design work and live sustainably The voices throughout this handbook present many different characteristics layers approaches and perspectives in this journey of sustaining This handbook divides into five sections which together present a holistic approach to understanding the many facets of sustainable design Part 1 Systems and Design Part 2 Global Impact Part 3 Values Ethics and Identity Part 4 Design for Behavior Change Part 5 Moving Forward This handbook will be invaluable to those wishing to broaden their understanding of sustainable design and students and practitioners of Environmental Studies Architecture Product Design and the Visual Arts
