Emerging Environmental Technologies Volume II 2:

Emerging Environmental Technologies, Volume II Vishal Shah, 2009-12-02 Within the span of last couple of years the increasing human interference with various natural ecosystems and higher discharge of pollutants has presented numerous challenges to the society related to preserving the nature for a better tomorrow. The challenges also mount pressure on the scientific community to invent technologies that would provide solutions to the problems that are man-made and also decrease the negative consequences that we are facing because of our own actions. This edited book attempts to present eight technological innovations that have shown potential to provide answers to a few challenges. Like the previous collection, the described innovations in the current volume also cover a range of areas including water and soil pollution, bio-sensors and energy. However, it is to be realized that no combination of technology can be enough to make a sizeable difference. As I said in my last collection, technological advances have to be integrated with a change in social behavior. The philosophy of sustainable development has to be the principle of future planning and growth. In this collection, I am pleased to include an article on noise pollution. Noise is a pollutant of our own behavior and can only be solved by a behavioral change. The change that is either voluntary or enforced by laws. As an environmental scientist, noise is not normally a pollutant that would come in mind as a leading pollutant.

Emerging Environmental Technologies, Volume II Vishal Shah, 2010 While numerous journals and books are available in the market highlighting the developments in the field of environmental technology, none of them exclusively focuses on the technologies that would be in the forefront in near to far future. Each and every article in the book is peer-reviewed and from a different sub-discipline. Because of its interdisciplinary topics, for instance, air pollution and energy production, this makes it a one book for all and serves as an excellent resource for scientists, entrepreneurs, politicians, and non-governmental organizations who wish to gain information on upcoming and promising technologies.

Environment and Development - Volume II Teng Teng, Ding Yifan, 2009-05-20 Environment and Development is a component of Encyclopedia of Development and Economic Sciences in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty-one Encyclopedias. The pressing need to combine protecting the environment with sustaining development has become increasingly recognized. This theme deals with environmental and ecological sustainable development. Environmental damage has not only created obstacles to sustainable economic development but is also posing great threats to human health and life to ecological systems and the natural world and to the socio-cultural environments in which human beings lead their daily lives. The content of the theme on Environment and Development is organized with state-of-the-art presentations covering the following aspects of the subject: Approaching Sustainable Development from Different Angles; Hazard and Risk Assessment and Risk Management; Current Views of Global Carrying Capacity; Social and Economic Disparities; Responses to the Challenges of Disparities and Unsustainable Use of Natural Resources; Environmental Economics and Eco-business; Environmental Values and Ethics; Other Important Future

Environmental Issues These two volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs
