Financial Accounting for MBAs

QUESTIONS

- Q1-1.** Organizations undertake four major activities: planning, financing, investing, and operating. Financing is the means a company uses to pay for resources. Investing refers to the buying and selling of resources necessary to carry out the organization's plans. Operating activities are the actual carrying out of these plans. Planning is the glue that connects these activities, including the organization's ideas, goals and strategies. Financial accounting information provides valuable input into the planning process, and, subsequently, reports on the results of plans so that corrective action can be taken, if necessary.
- Q1-2.** An organization's financing activities (liabilities and equity = sources of funds) pay for investing activities (assets = uses of funds). An organization's assets cannot be more or less than its liabilities and equity combined. This means: $\text{assets} = \text{liabilities} + \text{equity}$. This relation is called the accounting equation (sometimes called the *balance sheet equation*), and it applies to all organizations at all times.
- Q1-3.** The four main financial statements are: income statement, balance sheet, statement of stockholders' equity, and statement of cash flows. The income statement provides information about the company's revenues, expenses and profitability over a period of time. The balance sheet lists the company's assets (what it owns), liabilities (what it owes), and stockholders' equity (the residual claims of its owners) as of a point in time. The statement of stockholders' equity reports on the changes to each stockholders' equity account during the period. The statement of cash flows identifies the sources (inflows) and uses (outflows) of cash, that is, where the company got its cash from and what it did with it. Together, the four statements provide a complete picture of the financial condition of the company.
- Q1-4.** The balance sheet provides information that helps users understand a company's resources (assets) and claims to those resources (liabilities and stockholders' equity) as of a given *point in time*.

New Models of Financing and Financial Reporting for European SMEs Eva Kaili, Dimitrios Psarrakis, Raz van Hoinaru, 2019-02-28. This book looks at the 23 million registered Small and Medium Enterprises (SMEs) that make up 98 per cent of the EU economy. Addressing the high end of SMEs in terms of new models for SME funding and financial reporting, this merged way of looking at SMEs reveals a myopic thinking in terms of net present value and future cash flows generating short-termism and low risk appetite for business. This is not an accounting issue but rather a preference toward certain financial tools. A segment of SMEs, the ones that seek new ways of funding possibilities as well as modern technologies, MTFs listing blockchain ICOs etc. do require even without knowing IFRS for SMEs. This book reveals how market conditions impact the financial performance and sustainability of SMEs and also generate innovative policy interventions and financing strategies for SME integrity and efficiency. The authors frame their arguments in the context of the Capital Markets Union, looking at the Innovation Triangle, SME growth ecosystem and business models. They conclude by advocating for closing the circle of financing and financial reporting for SMEs while considering if new financial models of financing and financial reporting are good for all the SMEs or only for some. The economy is being shaped by new models of financing and financial reporting. Read this practitioners' view to understand the current changes and challenges.
