11.11A When installing the auxiliary drivebelt, make sure that it is centred • it must not overlap either edge of the grooved pulleys

being felt when its pulley is rotated clockwise, and a smooth return to the limit of its travel when released.

11 If the original drivebelt is being refitted, use the marks or notes made on removal, to ensure that it is installed to run in the same direction as it was previously. To fit the drivebelt, arrange it on the grooved pulleys so that it is centred in their grooves, and not overlapping their raised sides [note that the flat surface of the drivebelt is engaged on the idler, tensioner and water pump pulleys] and routed correctly (see illustrations). Start at the top, and work down to finish at the crankshaft pulley: rotate the tensioner pulley clockwise, slip the drivebelt onto the crankshaft pulley, then release the tensioner again.

12 Using a spanner applied to the crankshaft pulley bolt, rotate the crankshaft through at least two full turns clockwise to settle the drivebelt on the pulleys, then check that the drivebelt is properly installed.

13 Refit the auxiliary drivebelt cover and roadwheel, then lower the vehicle to the ground.

12 Underbonnet check for fluid leaks and hose condition

Caution: Renewal of air conditioning hoses must be left to a dealer service department or air conditioning specialist who has the equipment to depressurise the system

General

1 High temperatures in the engine compartment can cause the deterioration of the rubber and plastic hoses used for engine, accessory and emission systems operation. Periodic inspection should be made for cracks, loose clamps, material hardening and leaks.

2 Carefully check the large top and bottom radiator hoses, along with the other smaller-diameter cooling system hoses and metal pipes: do not forget the heater hoses/pipes which run from the engine to the bulkhead, and those to the engine oil cooler (where fitted). Inspect each hose along its entire length, replacing any that is cracked, swollen or shows signs of deterioration. Cracks may become more apparent if the hose is squeezed (see illustration). If you are using non-Ford specification antifreeze, and so have to renew the coolant every two years or so, it's a good idea to renew the hoses at that time, regardless of their apparent condition.

3 Make sure that all hose connections are tight. A leak in the cooling system will usually show up as white- or rust-coloured deposits on the areas adjoining the leak: if the spring clamps that are used to secure the hoses in this system appear to be slackening, they should be renewed to prevent the possibility of leaks.

4 Some other hoses are secured to their

fittings with clamps. Where clamps are used, check to be sure they haven't lost their tension, allowing the hose to leak. If clamps aren't used, make sure the hose has not expanded and/or hardened where it slips over the fitting, allowing it to leak.

12.2 Hoses, like drivebelts, have a habit of failing at the worst possible time • to prevent the inconvenience of a blown radiator or heater hose, inspect them carefully as shown here
