The Problem with Solutions Julie Guthman,2024-08-06 A concise and feisty takedown of the all style no substance tech ventures that fail to solve our food crises Why has Silicon Valley become the model for addressing today s myriad social and ecological crises With this book Julie Guthman digs into the impoverished solutions for food and agriculture currently emerging from Silicon Valley urging us to stop trying to fix our broken food system through finite capitalistic solutions and technological moonshots that do next to nothing to actualize a more just and sustainable system The Problem with Solutions combines an analysis of the rise of tech company solution culture with findings from actual research

on the sector's ill informed attempts to address the problems of food and agriculture. As this seductive approach continues to infiltrate universities and academia, Guthman challenges us to reject apolitical and self gratifying techno solutions and develop the capacity and willingness to respond to the root causes of these crises. Solutions she argues are a product of our current condition, not an answer to it. *El-Hi Textbooks and Serials in Print*, 2003 **Creating the Market University** Elizabeth Popp Berman, 2012-01-08 Academic science in the U.S. once self consciously avoided the market. But today it is seen as an economic engine that keeps the nation globally competitive. *Creating the Market University* compares the origins of biotech entrepreneurship, university patenting and university industry research centers to show how government decisions shaped by a new argument that innovation drives the economy transformed academic science. Civic Innovation in America Carmen Sirianni, Lewis Friedland, 2001-07-01 In this book two leading experts on community action provide the first scholarly examination of the civic renewal movement that has emerged in the United States in recent decades. Sirianni and Friedland examine civic innovation since the 1960s as social learning in four arenas: community organizing, development, civic environmentalism, community health and public journalism, and they link local efforts to broader networks and to the development of public policy for democracy. They also explore the emergence of a movement for civic renewal that builds upon the civic movements in these four arenas. In contrast to some recent studies that stress broad indicators of civic decline, this study analyzes innovation as a long process of social learning within specific institutional and policy domains with complex challenges and cross currents. It draws upon analytical frameworks of social capital, policy learning, organizational learning, regulatory culture, democratic theory and social movement theory. The study is based upon interviews with more than 400 innovative practitioners as well as extensive field observation, case study, action research and historical analysis. *Computers in Fisheries Research* Bernard A. Megrey, Erlend Moksness, 2008-11-26 The first edition of this book was published by Chapman and Hall Ltd in 1996. The first edition contained nine chapters and for all except one chapter the original chapter authors agreed to update their chapter. Comparing these chapters gives the reader an idea of the development over a time span of more than 10 years between the two editions. In the preparation of the second edition we decided to add more chapters reflecting some important fields with significant contributions to present day fishery research. These are the use of internet for searching of information, Chapter 2 and the present state and use of remote sensing, Chapter 5 ecosystem modeling, Chapter 8 and visualization of data, Chapter 10. This second edition provides a valuable sampling of contemporary applications. Scientists have an opportunity to evaluate the suitability of different computer technology applications to their particular research situation, thereby taking advantage of the experience of others. The chapters that follow are the fruition of this idea. The history behind this book started in 1989 when we were asked by Dr Vidar Wespestad, previously Alaska Fisheries Science Center, Seattle, USA to prepare and convene a session at the 1992 World Fishery Congress in Athens, Greece on computer applications in fisheries. We agreed that the idea was a good one and the

computer session in 1992 turned out to be very successful

Climate Change A. Barrie Pittock, 2013-11-26 It is widely accepted in the scientific community that climate change is a reality and that changes are happening with increasing rapidity In this second edition leading climate researcher Barrie Pittock revisits the effects that global warming is having on our planet in light of ever evolving scientific research Presenting all sides of the arguments about the science and possible remedies Pittock examines the latest analyses of climate change such as new and alarming observations regarding Arctic sea ice the recently published IPCC Fourth Assessment Report and the policies of the new Australian Government and how they affect the implementation of climate change initiatives New material focuses on massive investments in large scale renewables such as the kind being taken up in California as well as many smaller scale activities in individual homes and businesses which are being driven by both regulatory and market mechanisms The book includes extensive endnotes with links to ongoing and updated information as well as some new illustrations While the message is clear that climate change is here and in some areas might already be having disastrous effects there is still hope for the future and the ideas presented here will inspire people to take action Climate Change The Science Impacts and Solutions is an important reference for students in environmental or social sciences policy makers and people who are genuinely concerned about the future of our environment
