**Large-Scale Studies in Mathematics Education** James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and

inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact, currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them. This volume is unique as it directly discusses methodological issues in large scale studies and reports empirical data from large scale studies.

**Preparing Middle Level Educators for 21st Century Schools** Penny B. Howell, Shawn A. Faulkner, Jeanneine Jones, Jan Carpenter, 2018-05-01 Over the last decade significant changes have occurred in how schools are organized, how educators are prepared and certified, how accreditation policies have shifted, both curriculum and content as well as changes to the demographics of middle school classrooms. This volume, *Preparing Middle Level Educators for 21st Century Schools: Enduring Beliefs, Changing Times, Evolving Practices*, provides a review of current research focused on middle level educator preparation at all levels. Our enduring beliefs about young adolescents have not changed, e.g., need for developmentally responsive instruction, caring adults who understand them and are prepared to teach them, opportunities to explore their interests, but the political and sociocultural climate of schools and schooling has. In light of changing times, this volume allows researchers and teacher educators to share research from their context and inform the evolving practices of educator preparation for the middle level. The research presented in this volume is organized into three sections with an introduction provided for each. The authors grounded their work in the Association for Middle Level Education's teacher preparation standards 2012 and tenets of *This We Believe* NMSA 2010. By doing so, they examine topics that hold potential for meeting the learning needs of teachers and students in middle level schools. The first section includes chapters from individuals working to ensure that the enduring beliefs of middle level education continue to guide the structures of their middle level teacher preparation programs. The second set of chapters closely examines how changing times are shaping the work of teacher educators. Finally, the last section spotlights evolving practices that continue to develop in response to the changes impacting our classrooms, schools, and communities. This text provides readers with researched-based practices and information to help them continue the tradition of middle level teacher education. The enduring beliefs of preparing teachers who understand, respect, and honor the many talents, gifts, and contributions of the young adolescent student will guide teacher educators as they respond to the changing times of education and the evolving practices of teachers, teacher educators, and schools.

**The Stories We Tell** Valerie N. Faulkner, Patricia L. Marshall, Lee V. Stiff, 2019-08-29 *The Stories We Tell: Math, Race, Bias, Opportunity* positions educators as professional decision makers whose every day choices are deeply consequential. After exploring topics ranging from the early identification of talent, the use of demographic characteristics to make academic decisions, and the problematic casting of a gap in mathematical performance as about the students themselves, the book explores how professional decision making and a more precise use of data can impact mathematical performance outcomes. With gentle precision, the book analyzes the patterns of practice in place as educators sort children

according to perceived needs Through case studies the authors reconfigure the mathematics achievement gap as being about opportunity provided or denied at both the classroom and systemic levels The book has implications for school personnel as well as others curious about how opportunity impacts outcomes and how data is or is not used to make decisions about children Educators who challenge themselves to engage with the possibility of bias and then face the stories we tell ourselves about the race talent development student merit relationship will have the opportunity to write a powerful and equitable story going forward
