

Plants

Lesson 5 - How do plants reproduce?

Pollination is when pollen from the anther is transferred to the stigma. This can happen in different ways.

Wind - the wind can blow pollen from one plant to another.

Pollinators - insects such as bees, butterflies and flies are attracted to the brightly coloured petals. They land on a flower to drink nectar. When they land, grains of pollen stick to them. Then, when they go to the next flower, the pollen is transferred.

Once the pollen is transferred to the stigma, it travels down the style to the ovary. This is where the seed grows.

Challenge

Which of these animals are pollinators?
