Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world artificial intelligence AI is being incorporated into an array of professions The aviation and aerospace industry specifically is a field that has seen the

successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot. However, the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making. The Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn, improve, and predict. While highlighting topics such as computer-aided design, automated systems, and human factors, this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry. This book is ideally designed for pilots, scientists, engineers, aviation operators, air crash investigators, teachers, academicians, researchers, and students seeking current research on the application of AI in the field of aviation.

Human Factors in Aviation Earl L. Wiener, David C. Nagel, 1988

Since the 1950s, a number of specialized books dealing with human factors has been published, but very little in aviation. Human Factors in Aviation is the first comprehensive review of contemporary applications of human factors research to aviation. A must for aviation professionals, equipment and systems designers, pilots, and managers, with emphasis on definition and solution of specific problems. General areas of human cognition and perception, systems theory, and safety are approached through specific topics in aviation: behavioral analysis of pilot performance, cockpit automation, advancing display and control technology, and training methods.

Human Factors and Design Yuri Spirochkin, 2023-02-27

This book describes various manifestations of human factors when interacting with potentially dangerous technical systems: airplanes, launch vehicles, and spaceships; nuclear power plants; energy-saturated ground vehicles and infrastructure facilities. The idea of the book arose from the desire to find a common ground between industries that are important for safety. Their similarity lies in addition to the technological advancement of products and solutions in equally high safety requirements, in particular, taking into account the influence of human factor. Thus, it is of relevance to analyze an impact of human factor in the context of safety. The matter is rather complex: on the one hand, humans manage technical systems; on the other hand, human errors, negligence, or evil intentions can turn the system into a threat with disastrous consequences. However, human interaction with any technical system begins earlier in the design stage. In this stage, designer, being creator of the system, must ensure a safe operation and take into consideration possible risks, including those caused by human factors itself. The book is interdisciplinary in nature and intended mainly for designers of technical systems, aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems. The examples given are intended to benefit from experiences of not one but a number of industries.

This perhaps stems from a variety of sometimes disparate activities in the realms of education, industry, and research. Aviation Safety Law and Regulation Ruwantissa Abeyratne, 2024-04-05 Human and technical factors play a major role in the safety of aviation From the competency of the airline pilot to the design and manufacture of aircraft as well as how the aircraft is operated there are compelling factors that a State must consider in implementing its safety management system These elements are well regulated in Annex 1 Personnel Licensing Annex 2 Rules of the Air Annex 6 Operations of Aircraft and Annex 8 Airworthiness of Aircraft to the Convention on International Civil Aviation Chicago Convention respectively The overall philosophy of these Annexes is embodied in the broader principles contained in Annex 19 Safety Management Systems This book contains commentaries on the relevant Standards of these Annexes that require legal and policy analysis It begins with a treaty interpretation of the Chicago Convention and the Annexes as well as their amendment processes and goes on to critically analyze the role of the International Civil Aviation Organization in that context It then lays out the provisions of the four Annexes and offers legal and policy commentaries on Standards therein which are not self explanatory where applicable relevant and necessary A significant feature of the book is its conclusion which asks questions and offers

point by point suggestions in response that States could benefit from in ensuring the safety of international civil aviation
There has been no previous book published containing critical analyses and commentaries on Annexes 2 6 8 and 19 to the
Chicago Convention in one repository of literature This book will be of interest and use to aeronautical authorities academics
students of international law and air law legal practitioners and regulators worldwide
