Lg Electronics Microwave User Guide:

The Innovation Manual David Midgley, 2010-12-03 The Innovation Manual provides a solution to the problems faced by those at the forefront of innovation. It takes you through the seven topics that have the highest impact on the success of value innovation: be this innovation a new product, a new service or a new business model. The seven topics are: Creating advantage in the minds of many; Chartering innovation within the organization; Preparing, developing and supporting the right team; Placing customers at the centre of innovation; Changing the organization to deliver the innovation; Motivating the right partners and sharing the returns; Building momentum in the market. Each topic is linked to an organized toolkit that allows managers to apply this knowledge immediately. The tools sit within an overall framework to show how they build on and reinforce one another. Along with this, the book guides busy managers on applying the tools properly, detailing the relevance of each for specific industries and how to customize them when necessary.

Micro Electronic and Mechanical Systems Kenichi Takahata, 2009-12-01 This book discusses key aspects of MEMS technology, areas organized in twenty-seven chapters that present the latest research developments in micro-electronic and mechanical systems. The book addresses a wide range of fundamental and practical issues related to MEMS: advanced metal oxide semiconductor (MOS) and complementary MOS (CMOS) devices; SoC technology; integrated circuit testing and verification; and other important topics in the field. Several chapters cover state-of-the-art microfabrication techniques and materials as enabling technologies for the microsystems. Reliability issues concerning both electronic and mechanical aspects of these devices and systems are also addressed in various chapters.

Microwave Indices from Active and Passive Sensors for Remote Sensing Applications Emanuele Santi, Simonetta Paloscia, 2019-10-21 Past research has comprehensively assessed the capabilities of satellite sensors operating at microwave frequencies: both active SAR scatterometers and passive radiometers for the remote sensing of Earth's surface. Besides brightness temperature and backscattering coefficient, microwave indices defined as a combination of data collected at different frequencies and polarizations revealed a good sensitivity to hydrological cycle parameters such as surface soil moisture, vegetation water content, and snow depth and its water equivalent. The differences between microwave backscattering and emission at more frequencies and polarizations have been well established in relation to these parameters, enabling operational retrieval algorithms based on microwave indices to be developed. This Special Issue aims at providing an overview of microwave signal capabilities in estimating the main land parameters of the hydrological cycle, e.g., soil moisture, vegetation water content, and snow water equivalent, on both local and global scales, with a particular focus on the applications of microwave indices.
