Measuring The User Experience On A Large Scale:

Measuring the User Experience Bill Albert, Tom Tullis, 2010-07-27 Measuring the User Experience provides the first single source of practical information to enable usability professionals and product developers to effectively measure the usability of any product by choosing the right metric applying it and effectively using the information it reveals Authors Tullis and Albert organize dozens of metrics into six categories performance issues based self reported web navigation derived and behavioral physiological They explore each metric considering best methods for collecting analyzing and presenting the data They provide step by step guidance for measuring the usability of any type of product using any type of technology This book is recommended for usability professionals developers programmers information architects interaction designers market researchers and students in an HCI or HFE program Presents criteria for selecting the most appropriate metric for every case Takes a product and technology neutral approach Presents in depth case studies to show how organizations have successfully used the metrics and the information they revealed *Design, User Experience, and Usability* Aaron Marcus, Elizabeth Rosenzweig, Marcelo M. Soares, 2023-07-08 This 5 volume HCII DUXU 2023 book set constitutes the refereed proceedings of the 12th International Conference on Design User Experience and Usability DUXU 2023 held as part of the 24th International Conference HCI International 2023 which took place in Copenhagen Denmark in July 2023 A total of 1578 papers and 396 posters have been accepted for publication in the HCII 2023 proceedings from a total of 7472 submissions The papers included in this volume set were organized in topical sections as follows Part I Design methods tools and practices emotional and persuasive design Part II Design case studies and creativity and design education Part III Evaluation methods and techniques and usability user experience and technology acceptance studies Part IV Designing learning experiences and chatbots conversational agents and robots design and user experience Part V DUXU for cultural heritage and DUXU for health and wellbeing **Measuring User Engagement** Mounia Lalmas, Heather O'Brien, Elad Yom-Tov, 2022-05-31 User engagement refers to the quality of the user experience that emphasizes the positive aspects of interacting with an online application and in particular the desire to use that application longer and repeatedly User engagement is a key concept in the design of online applications whether for desktop tablet or mobile motivated by the observation that successful applications are not just used but are engaged with Users invest time attention and emotion in their use of technology and seek to satisfy pragmatic and hedonic needs Measurement is critical for evaluating whether online applications are able to successfully engage users and may inform the design of and use of applications User engagement is a multifaceted complex phenomenon this gives rise to a number of potential measurement approaches Common ways to evaluate user engagement include using self report measures e g questionnaires observational methods e g facial expression analysis speech analysis neuro physiological signal processing methods e g respiratory and cardiovascular accelerations and decelerations muscle spasms and web analytics e g number of site visits click depth These methods

represent various trade offs in terms of the setting laboratory versus in the wild object of measurement user behaviour affect or cognition and scale of data collected For instance small scale user studies are deep and rich but limited in terms of generalizability whereas large scale web analytic studies are powerful but negate users motivation and context The focus of this book is how user engagement is currently being measured and various considerations for its measurement Our goal is to leave readers with an appreciation of the various ways in which to measure user engagement and their associated strengths and weaknesses We emphasize the multifaceted nature of user engagement and the unique contextual constraints that come to bear upon attempts to measure engagement in different settings and across different user groups and web domains At the same time this book advocates for the development of good measures and good measurement practices that will advance the study of user engagement and improve our understanding of this construct which has become so vital in our wired world

of multimedia is unique in offering a rich and dynamic forum for researchers from traditional fields to collaborate and develop new solutions and knowledge that transcend the boundaries of individual disciplines Despite the prolific research activities and outcomes however few efforts have been made to develop books that serve as an introduction to the rich spectrum of topics covered by this broad field A few books are available that either focus on specific subfields or basic background in multimedia Tutorial style materials covering the active topics being pursued by the leading researchers at frontiers of the field are currently lacking In 2015 ACM SIGMM the special interest group on multimedia launched a new initiative to address this void by selecting and inviting 12 rising star speakers from different subfields of multimedia research to deliver plenary tutorial style talks at the ACM Multimedia conference for 2015 Each speaker discussed the challenges and state of the art developments of their prospective research areas in a general manner to the broad community The covered topics were comprehensive including multimedia content understanding multimodal human human and human computer interaction multimedia social media and multimedia system architecture and deployment Following the very positive responses to these talks the speakers were invited to expand the content covered in their talks into chapters that can be used as reference material for researchers students and practitioners Each chapter discusses the problems technical challenges state of the art approaches and performances open issues and promising direction for future work Collectively the chapters provide an excellent sampling of major topics addressed by the community as a whole This book capturing some of the outcomes of such efforts is well positioned to fill the aforementioned needs in providing tutorial style reference materials for frontier topics in multimedia At the same time the speed and sophistication required of data processing have grown In addition to simple queries complex algorithms like machine learning and graph analysis are becoming common And in addition to batch processing streaming analysis of real time data is required to let organizations take timely action Future computing platforms will need to not only scale out traditional workloads but support these new applications too This book a revised version of the 2014 ACM Dissertation Award winning dissertation proposes an architecture for cluster computing systems that can tackle emerging data processing workloads at scale Whereas early cluster computing systems like MapReduce handled batch processing our architecture also enables streaming and interactive queries while keeping MapReduce s scalability and fault tolerance And whereas most deployed systems only support simple one pass computations e g SQL queries ours also extends to the multi pass algorithms required for complex analytics like machine learning Finally unlike the specialized systems proposed for some of these workloads our architecture allows these computations to be combined enabling rich new applications that intermix for example streaming and batch processing We achieve these results through a simple extension to MapReduce that adds primitives for data sharing called Resilient Distributed Datasets RDDs We show that this is enough to capture a wide range of workloads We implement RDDs in the open source Spark system which we evaluate using synthetic and real workloads Spark matches or exceeds the performance of specialized systems in

many domains while offering stronger fault tolerance properties and allowing these workloads to be combined Finally we examine the generality of RDDs from both a theoretical modeling perspective and a systems perspective This version of the dissertation makes corrections throughout the text and adds a new section on the evolution of Apache Spark in industry since 2014 In addition editing formatting and links for the references have been added

Design, User Experience, and Usability: Theory and Practice Aaron Marcus, Wentao Wang, 2018-07-10 The three volume set LNCS 10918 10919 and 10290 constitutes the proceedings of the 7th International Conference on Design User Experience and Usability DUXU 2018 held as part of the 20th International Conference on Human Computer Interaction HCII 2018 in Las Vegas NV USA in July 2018 The total of 1171 papers presented at the HCII 2018 conferences were carefully reviewed and selected from 4346 submissions The papers cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of applications areas The total of 165 contributions included in the DUXU proceedings were carefully reviewed and selected for inclusion in this three volume set The 55 papers included in this volume are organized in topical sections on design thinking methods and practice usability and user experience evaluation methods and tools and DUXU in software development
