Irreducible Geometric Subgroups of Classical Algebraic Groups Timothy C. Burness, Soumaïa Ghandour, Donna M. Testerman, 2016-01-25 Let G be a simple classical algebraic group over an algebraically closed field of characteristic p with natural module V . Let H be a closed subgroup of G and let ρ be a non trivial irreducible tensor indecomposable restricted rational module such that the restriction of ρ to H is irreducible. In this paper the authors classify the triples of this form where H is a disconnected maximal positive dimensional closed subgroup of G preserving a natural geometric structure on V .

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016. Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

On Non-Generic Finite Subgroups of Exceptional Algebraic Groups Alastair J. Litterick, 2018-05-29 The study of finite subgroups of a simple algebraic group G reduces in a sense to those which are almost simple. If an almost simple subgroup of G has a socle which is not isomorphic to a group of Lie type in the underlying characteristic of G then the subgroup is called non generic. This paper considers non generic subgroups of simple algebraic groups of exceptional type in arbitrary characteristic.

Continuous-Time Random Walks for the Numerical Solution of Stochastic Differential Equations Nawaf Bou-Rabee, Eric Vanden-Eijnden, 2019-01-08 This paper introduces time continuous numerical schemes to simulate stochastic differential equations (SDEs) arising in mathematical finance population dynamics chemical kinetics epidemiology biophysics and polymeric fluids. These schemes are obtained by spatially discretizing the Kolmogorov equation associated with the SDE in such a way that the resulting semi discrete equation generates a Markov jump process that can be realized exactly using a Monte Carlo method. In this construction the jump size of the approximation can be bounded uniformly in

space which often guarantees that the schemes are numerically stable for both finite and long time simulation of SDEs

Medial/Skeletal Linking Structures for Multi-Region Configurations James Damon, Ellen Gasparovic, 2018-01-16 The authors consider a generic configuration of regions consisting of a collection of distinct compact regions in which may be either regions with smooth boundaries disjoint from the others or regions which meet on their piecewise smooth boundaries in a generic way They introduce a skeletal linking structure for the collection of regions which simultaneously captures the regions individual shapes and geometric properties as well as the positional geometry of the collection The linking structure extends in a minimal way the individual skeletal structures on each of the regions This allows the authors to significantly extend the mathematical methods introduced for single regions to the configuration of regions

Induction, Bounding, Weak Combinatorial Principles, and the Homogeneous Model Theorem Denis R. Hirschfeldt, Karen Lange, Richard A. Shore, 2017-09-25 Goncharov and Peretyatkin independently gave necessary and sufficient conditions for when a set of types of a complete theory is the type spectrum of some homogeneous model of Their result can be stated as a principle of second order arithmetic which is called the Homogeneous Model Theorem HMT and analyzed from the points of view of computability theory and reverse mathematics Previous computability theoretic results by Lange suggested a close connection between HMT and the Atomic Model Theorem AMT which states that every complete atomic theory has an atomic model The authors show that HMT and AMT are indeed equivalent in the sense of reverse mathematics as well as in a strong computability theoretic sense and do the same for an analogous result of Peretyatkin giving necessary and sufficient conditions for when a set of types is the type spectrum of some model

Degree Spectra of Relations on a Cone Matthew Harrison-Trainer, 2018-05-29 Let \mathcal{A} be a mathematical structure with an additional relation R The author is interested in the degree spectrum of R either among computable copies of \mathcal{A} when \mathcal{A} is a natural structure or to make this rigorous among copies of \mathcal{A} R computable in a large degree d He

introduces the partial order of degree spectra on a cone and begin the study of these objects Using a result of Harizanov that assuming an effectiveness condition on \mathcal{A} and \mathcal{R} if \mathcal{R} is not intrinsically computable then its degree spectrum contains all \mathcal{C} e degrees the author shows that there is a minimal non trivial degree spectrum on a cone consisting of the \mathcal{C} e degrees

An Elementary Recursive Bound for Effective Positivstellensatz and Hilbert's 17th Problem Henri

Lombardi, Daniel Perrucci, Marie-Françoise Roy, 2020-04-03 The authors prove an elementary recursive bound on the degrees for Hilbert's 17th problem More precisely they express a nonnegative polynomial as a sum of squares of rational functions and obtain as degree estimates for the numerators and denominators the following tower of five exponentials $2^{2^{2^d} 4k}$ where d is the number of variables of the input polynomial The authors method is based on the proof of an elementary recursive bound on the degrees for Stengle's Positivstellensatz More precisely the authors give an algebraic certificate of the emptiness of the realization of a system of sign conditions and obtain as degree bounds for this certificate a tower of five exponentials namely $2^{2^{\max\{2^d, 4k\}} 2^{16k \log d}}$ where d is a bound on the degrees s is the number of polynomials and k is the number of variables of the input polynomials

Stable Stems Daniel C. Isaksen, 2020-02-13 The author presents a detailed analysis of 2 complete stable homotopy groups both in the classical context and in the motivic context over \mathbb{C} He uses the motivic May spectral sequence to compute the cohomology of the motivic Steenrod algebra over \mathbb{C} through the 70 stem He then uses the motivic Adams spectral sequence to obtain motivic stable homotopy groups through the 59 stem He also describes the complete calculation to the 65 stem but defers the proofs in this range to forthcoming publications In addition to finding all Adams differentials the author also resolves all hidden extensions by 2 and through the 59 stem except for a few carefully enumerated exceptions that remain unknown The analogous classical stable homotopy groups are easy consequences The author also computes the motivic stable homotopy groups of the cofiber of the motivic element This computation is essential for resolving hidden extensions in the Adams spectral sequence He shows that the homotopy groups of the cofiber of are the same as the E_2 page of the classical Adams Novikov spectral sequence This allows him to compute the classical Adams Novikov spectral sequence including differentials and hidden extensions in a larger range than was previously known

Fundamental Solutions and Local Solvability for Nonsmooth Hormander's Operators Marco

Bramanti, Luca Brandolini, Maria Manfredini, Marco Pedroni, 2017-09-25 The authors consider operators of the form in a bounded domain of where are nonsmooth Hormander's vector fields of step such that the highest order commutators are only Hölder continuous Applying Levi's parametrix method the authors construct a local fundamental solution for and provide growth estimates for and its first derivatives with respect to the vector fields Requiring the existence of one more derivative of the coefficients the authors prove that also possesses second derivatives and they deduce the local solvability of constructing by means of a solution to with Hölder continuous The authors also prove estimates on this solution

Algebraic $\overline{\mathbb{Q}}$ -Groups as Abstract Groups Olivier Frécon, 2018-10-03 The author analyzes the abstract structure

of algebraic groups over an algebraically closed field F of characteristic zero and a given connected affine algebraic Q group the main theorem describes all the affine algebraic Q groups such that the groups are isomorphic as abstract groups. In the same time it is shown that for any two connected algebraic Q groups the elementary equivalence of the pure groups implies that they are abstractly isomorphic. In the final section the author applies his results to characterize the connected algebraic groups all of whose abstract automorphisms are standard when Q is either of positive characteristic or of characteristic zero. A fairly general criterion is exhibited.

The Planar Cubic Cayley Graphs Agelos Georgakopoulos, 2018-01-16 The author obtains a complete description of the planar cubic Cayley graphs providing an explicit presentation and embedding for each of them. This turns out to be a rich class comprising several infinite families. He obtains counterexamples to conjectures of Mohar, Bonnington and Watkins. The author's analysis makes the involved graphs accessible to computation, corroborating a conjecture of Droms.

Explicit Arithmetic of Jacobians of Generalized Legendre Curves Over Global Function Fields Lisa Berger, Chris Hall, Rene Pannekoek, Rachel Pries, Shahed Sharif, 2020-09-28 The authors study the Jacobian J of the smooth projective curve C of genus $r-1$ with affine model $y^r = x^{r-1}x+1$ over the function field $\mathbb{F}_q(t)$ when p is prime and $r \geq 2$ is an integer prime to p . When q is a power of p and d is a positive integer the authors compute the L function of J over $\mathbb{F}_q(t)$ and show that the Birch and Swinnerton-Dyer conjecture holds for J over $\mathbb{F}_q(t)$.

Elliptic PDEs on Compact Ricci Limit Spaces and Applications Shouhei Honda, 2018-05-29 In this paper the author studies elliptic PDEs on compact Gromov-Hausdorff limit spaces of Riemannian manifolds with lower Ricci curvature bounds. In particular the author establishes continuities of geometric quantities which include solutions of Poisson's equations, eigenvalues of Schrödinger operators, generalized Yamabe constants, and eigenvalues of the Hodge Laplacian with respect to the Gromov-Hausdorff topology. The author applies these to the study of second order differential calculus on such limit spaces.

Mathematical Reasoning: The History and Impact of the DReaM Group Gregory Michaelson, 2021-11-20 This collection of essays examines the key achievements and likely developments in the area of automated reasoning. In keeping with the group ethos, Automated Reasoning is interpreted liberally, spanning underpinning theory, tools for reasoning, argumentation, explanation, computational creativity, and pedagogy. Wider applications including secure and trustworthy software and health care and emergency management. The book starts with a technically oriented history of the Edinburgh Automated Reasoning Group written by Alan Bundy, which is followed by chapters from leading researchers associated with the group. Mathematical Reasoning: The History and Impact of the DReaM Group will attract considerable interest from researchers and practitioners of Automated Reasoning, including postgraduates. It should also be of interest to those researching the history of AI.

Direct and Inverse Scattering at Fixed Energy for Massless Charged Dirac Fields by Kerr-Newman-de Sitter Black Holes Thierry Daudé, François Nicoleau, 2017-04-25 In this paper the authors study the direct and inverse scattering theory at fixed energy for massless charged Dirac fields evolving in the exterior

region of a Kerr Newman de Sitter black hole In the first part they establish the existence and asymptotic completeness of time dependent wave operators associated to our Dirac fields This leads to the definition of the time dependent scattering operator that encodes the far field behavior with respect to a stationary observer in the asymptotic regions of the black hole the event and cosmological horizons The authors also use the miraculous property quoting Chandrasekhar that the Dirac equation can be separated into radial and angular ordinary differential equations to make the link between the time dependent scattering operator and its stationary counterpart This leads to a nice expression of the scattering matrix at fixed energy in terms of stationary solutions of the system of separated equations In a second part the authors use this expression of the scattering matrix to study the uniqueness property in the associated inverse scattering problem at fixed energy Using essentially the particular form of the angular equation that can be solved explicitly by Frobenius method and the Complex Angular Momentum technique on the radial equation the authors are finally able to determine uniquely the metric of the black hole from the knowledge of the scattering matrix at a fixed energy
