Memo Of Physical Science Example Of 2014:

NASA Technical Memorandum ,1994 Unclear Physics Målfrid Braut-Hegghammer,2016-08 Many authoritarian leaders want nuclear weapons but few manage to acquire them Autocrats seeking nuclear weapons fail in different ways and to varying degrees Iraq almost managed it Libya did not come close In Unclear Physics M lfrid Braut Hegghammer compares the two failed nuclear weapons programs showing that state capacity played a crucial role in the trajectory and outcomes of both projects Braut Hegghammer draws on a rich set of new primary sources collected during years of research in archives fieldwork across the Middle East and interviews with scientists and decision makers from both states She gained access to documents and individuals that no other researcher has been able to consult Her book tells the story of the Iraqi and Libyan programs from their origins in the late 1950s and 1960s until their dismantling This book reveals contemporary perspectives from scientists and regime officials on the opportunities and challenges facing each project Many of the findings challenge the conventional wisdom about clandestine weapons programs in closed authoritarian states and their prospects of success or failure Braut Hegghammer suggests that scholars and analysts ought to pay closer attention to how state capacity affects nuclear weapons programs in other authoritarian regimes both in terms of questioning the actual control these leaders have over their nuclear weapons programs and the capability of their scientists to solve complex technical challenges

The impact of spending cuts on science and scientific research Great Britain: Parliament: House of Commons: Science and Technology Committee,2010-03-25 The pressure to be seen to be making cuts across the public sector is threatening to undermine both the Government s good record on investment in science and the economic recovery Whilst the contribution of a strong domestic science base is widely acknowledged methodological problems with quantifying its precise value to the economy mean that it is in danger of losing out in Whitehall negotiations Scientists are under increasing pressure to demonstrate the impact of their work and there is concern that areas without immediate technology

applications are being undervalued The Committee believes the Government faced a strategic choice invest in areas with the greatest potential to influence and improve other areas of spending or make cuts of little significance now but that will have a devastating effect upon British science and the economy in the years to come Scientific Authorship Mario Biagioli, Peter Galison, 2014-01-27 Since the seventeenth century our ideas of scientific authorship have expanded and changed dramatically In this ambitious volume of new work Mario Biagioli and Peter Galison have brought together historians of science literary historians and historians of the book Together they track the changing nature and identity of the author in science both historically and conceptually from the emergence of scientific academies in the age of Galileo to concerns with large scale multiauthorship and intellectual property rights in the age of cloning labs and pharmaceutical giants How for example do we decide whether a chemical compound is discovered or invented What does it mean to patent genetic material Documenting the emergence of authorship in the late medieval period authorship's limits and its fragmentation Scientific Authorship offers a collective history of a complex relationship *5 Steps to a 5 AP Physics B, 2014 Edition* Greg Jacobs, Joshua Schulman, 2013-07-10 Get ready for your AP exam with this straightforward and easy to follow study guide updated for all the latest exam changes 5 Steps to a 5 AP Physics B features an effective 5 step plan to guide your preparation program and help you build the skills knowledge and test taking confidence you need to succeed This fully revised edition covers the latest course syllabus and provides model tests that reflect the latest version of the exam Inside you will find 5 Step Plan to a Perfect 5 1 Set Up Your Study Program 2 Determine Your Test Readiness 3 Develop Strategies for Success 4 Develop the Knowledge You Need to Score High 5 Build Your Test Taking Confidence 2 complete practice AP Physics B exams 3 separate plans to fit your study style Review material updated and geared to the most recent tests Savvy information on how tests are constructed scored and used **World Congress on Medical Physics and Biomedical Engineering, June 7-12, 2015, Toronto, Canada** David A. NNSA laboratories Los Alamos National Laboratory Lawrence Livermore National Laboratory and Sandia National Laboratories to multiagency federally funded research and development centers with direct sustainment and sponsorship by multiple national security agencies This report makes recommendations for the governance of NNSA laboratories to better align with the evolving national security landscape and the laboratories increasing engagement with the other national security agencies while simultaneously encouraging the best technical solutions to national problems from the entire range of national security establishments According to this report the Department of Energy should remain the sole sponsor of the NNSA laboratories as federally funded research and development centers The NNSA laboratories will remain a critically important resource to meet U S national security needs for many decades to come The recommendations of Aligning the Governance Structure of the NNSA Laboratories to Meet 21st Century National Security Challenges will improve the governance of the laboratories and strengthen their strategic relationship with the non DOE national security agencies

CMS Pixel Detector Upgrade and Top Quark Pole Mass Determination Simon Spannagel, 2017-08-01 This thesis addresses two different topics both vital for implementing modern high energy physics experiments detector development and data analysis Providing a concise introduction to both the standard model of particle physics and the basic principles of semiconductor tracking detectors it presents the first measurement of the top quark pole mass from the differential cross section of $t\bar{t}J$ events in the dileptonic $t\bar{t}$ decay channel The first part focuses on the development and characterization of silicon pixel detectors To account for the expected increase in luminosity of the Large Hadron Collider LHC the pixel detector of the compact muon solenoid CMS experiment is replaced by an upgraded detector with new front end electronics It presents comprehensive test beam studies conducted to verify the design and quantify the performance of the new front end in terms of tracking efficiency and spatial resolution Furthermore it proposes a new cluster interpolation method which utilizes the third central moment of the cluster charge distribution to improve the position resolution The second part of the thesis introduces an alternative measurement of the top quark mass from the normalized differential production cross sections of dileptonic top quark pair events with an additional jet The energy measurement is 8TeV Using theoretical predictions at next to leading order in perturbative Quantum Chromodynamics QCD the top quark pole mass is determined using a template fit method

Physics Briefs, 1985 Tunnel Visions Michael Riordan, Lilian Hoddeson, Arienne W. Kolb, 2015-11-20 A detailed and engaging account of the development of the superconducting supercollider one of the largest scientific undertakings in the United States Journal of American History Starting in the 1950s US physicists dominated the search for elementary particles aided by the association of this research with national security they held this position for decades In an effort to maintain their hegemony and track down the elusive Higgs boson they convinced President Reagan and Congress to support construction of the multibillion dollar Superconducting Super Collider project in Texas the largest basic science project ever attempted But after the Cold War ended and the estimated SSC cost surpassed ten billion dollars Congress terminated the project in October 1993 Drawing on extensive archival research contemporaneous press accounts and over one hundred interviews with scientists engineers government officials and others involved Tunnel Visions tells the riveting story of the aborted SSC project The authors examine the complex interrelated causes for its demise including problems of large project management continuing cost overruns and lack of foreign contributions In doing so they ask whether Big Science has become too large and expensive including whether academic scientists and their government overseers can effectively manage such an enormous undertaking Focusing on the scientific technical and political conflicts that led to

delays ever rising costs and eventually the SSC's cancellation by Congress Tunnel Visions is a true techno thriller Burton Richter winner of the Nobel Prize in Physics Most good science stories are tales of discovery and success but failure can be just as riveting Here two historians and an archivist describe the greatest particle physics experiment that never was Scientific American

Political Animals Rick Shenkman, 2016-01-05 Can a football game affect the outcome of an election What about shark attacks Or a drought In a rational world the answer of course would be no But as bestselling historian Rick Shenkman explains in Political Animals our world is anything but rational Drawing on science politics and history Shenkman explores the hidden forces behind our often illogical choices Political Animals challenges us to go beyond the headlines which often focus on what politicians do or say they'll do and to

concentrate instead on what's really important: what shapes our response. Shenkman argues that contrary to what we tell ourselves, it's our instincts rather than arguments appealing to reason that usually prevail. Pop culture tells us we can trust our instincts, but science is proving that when it comes to politics, our Stone Age brain often malfunctions, misfires, and leads us astray. Fortunately, we can learn to make our instincts work in our favor. Shenkman takes readers on a whirlwind tour of laboratories where scientists are exploring how sea slugs remember, chimpanzees practice deception, and patients whose brains have been split in two tell stories. The scientists' findings give us new ways of understanding our history and ourselves and prove we don't have to be prisoners of our evolutionary past. In this engaging, illuminating, and often riotous chronicle of our political culture, Shenkman probes the depths of the human mind to explore how we can become more political and less animal.
