

The background of the slide is a collage of four images related to the ocean. The top-left image shows a close-up of blue water with gentle ripples. The top-right image shows a rocky underwater landscape with some white, possibly coral or mineral deposits. The bottom-left image shows a wider view of the ocean surface with more pronounced wave patterns. The bottom-right image shows a rocky underwater landscape, similar to the top-right one, with some white deposits.

Ocean System Studies: The ocean system ,1988 **The IMLI Treatise On Global Ocean Governance** David Joseph Attard,David M Ong,Dino Kritsiotis,2018-07-11 The 1982 United Nations Convention on the Law of the Sea UNCLOS remains the cornerstone of global ocean governance However it lacks effective provisions or mechanisms to ensure that all ocean space and related problems are dealt with holistically With seemingly no opportunity for revision due to the Conventions burdensome amendment provisions complementary mechanisms dealing with such aspects of global ocean governance including maritime transport fisheries and marine environmental sustainability have been developed under the aegis of the United Nations and other relevant international organizations This approach is inherently fragmented and unable to achieve sustainable global ocean governance In light of the Sustainable Development Goals SDGs particularly Goal 14 the IMLI Treatise proposes a new paradigm on the basis of integrated and cross sectoral approach in order to realise a more effective and sustainable governance regime for the oceans This volume focuses on the role of UN as the central intergovernmental organization responsible for global ocean governance It examines the ocean governance challenges and how the present legal policy and institutional frameworks of the UN have addressed these challenges It identifies the strengths and weaknesses of UN legal structures and offers tangible proposals to realize the ambition of a global ocean governance system

Sustaining Ocean Observations to Understand Future Changes in Earth's Climate National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Ocean Studies Board,Committee on Sustaining Ocean Observations to Understand Future Changes in Earth's Climate,2018-01-20 The ocean is an integral component of the Earth s climate system It covers about 70% of the Earth s surface and acts as its primary reservoir of heat and carbon absorbing over 90% of the surplus heat and about 30% of the carbon dioxide associated with human activities and receiving close to 100% of fresh water lost from land ice With the accumulation of greenhouse gases in the atmosphere notably carbon dioxide from fossil fuel combustion the Earth s climate is now changing more rapidly than at any time since the advent of human societies Society will increasingly face complex decisions about how to mitigate the adverse impacts of climate change such as droughts sea level rise ocean acidification species loss changes to growing seasons and stronger and possibly more frequent storms Observations play a foundational role in documenting the state and variability of components of the climate system and facilitating climate prediction and scenario development Regular and consistent collection of ocean observations over decades to centuries would monitor the Earth s main reservoirs of heat carbon dioxide and water and provides a critical record of long term change and variability

over multiple time scales Sustained high quality observations are also needed to test and improve climate models which provide insights into the future climate system Sustaining Ocean Observations to Understand Future Changes in Earth's Climate considers processes for identifying priority ocean observations that will improve understanding of the Earth's climate processes and the challenges associated with sustaining these observations over long timeframes

Ocean Circulation and Climate Stephen M. Griffies, Anne Marie Treguier, 2013-10-22 This chapter focuses on numerical models used to understand and predict large scale circulation such as the circulation comprising basin and global scales It is organized according to two themes The first addresses physical and numerical topics forming a foundation for ocean models We focus here on the science of ocean models in which we ask questions about fundamental processes and develop the mathematical equations for ocean thermo hydrodynamics We also touch upon various methods used to represent the continuum ocean fluid with a discrete computer model raising such topics as the finite volume formulation of the ocean equations the choice for vertical coordinate the complementary issues related to horizontal gridding and the pervasive questions of subgrid scale parameterizations The second theme of this chapter concerns the applications of ocean models in particular how to design an experiment and how to analyze results This material forms the basis for ocean modelling with the aim being to mechanistically describe interpret understand and predict emergent features of the simulated and ultimately the observed ocean
