**Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2004** Christian Barillot, David R. Haynor, Pierre Hellier, 2011-04-05 The 7th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI 2004 was held in Saint Malo Brittany France at the Palais du Grand Large conference center September 26-29 2004. The purpose of MICCAI 2004 was to strongly encourage and support IRISA Rennes. IRISA is a publicly funded national research laboratory with a staff of 370 including 150 full-time research scientists or teaching research scientists and 115 postgraduate students. INRIA, the CNRS, and the University of Rennes 1 are all partners in this mixed research unit, and all three organizations were helpful in supporting MICCAI. MICCAI has become a premier international conference with in-depth papers on the multidisciplinary fields of medical image computing, computer-assisted intervention, and medical robotics. The conference brings together clinicians, biological scientists, computer scientists, engineers, physicists, and other researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The impact of MICCAI increases each year, and the quality and quantity of submitted papers this year was very impressive. We received a record 516 full submissions, 8 pages in length, and 101 short communications, 2 pages from 36 different countries and 5 continents (see figures below). All submissions were reviewed by up to 4 external reviewers from the Scientific Review Committee and a primary reviewer from the Program Committee. All reviews were then considered by the MICCAI 2004 Program Committee, resulting in the acceptance of 235 full papers and 33 short communications.

**Advances in PET** Jun Zhang, Michael V. Knopp, 2020-05-11 This book is a guide to new and emerging PET technology instrumentation and its place in clinical practice. PET technology is currently moving from the conventional photomultiplier tube (PMT) detector-based PET to the new generation solid-state light sensor detector. This is a technological leap and holds significant implications for the use of PET imaging. This book introduces and describes the emerging and new generation of PET instrumentations and technologies across manufacturers, focusing on solid-state PET detector designs, system characteristics, and clinical practices, as well as future advanced Time-of-Flight (TOF) PET technologies. Organized into three sections: the basics of PET imaging, solid-state digital PET instrumentation, technology, and clinical practice, and a look to the future of PET imaging, chapters present a full picture of PET imaging where we are and where we will be. Nuclear medicine physicians, physicists, and technologists can use this book to better understand future PET systems, novel PET technologies, and potential game-changing changes of clinical PET practice.
