If you are a Java programmer, this book offers you a Java approach to beginning Google App Engine. You will explore the runtime environment, front-end technologies like Google Web Toolkit, Adobe Flex and the datastore behind App Engine. You will also explore Java support on App Engine from end to end. The journey begins with a look at the Google Plugin for Eclipse and finishes with a working web application that uses Google Web Toolkit, Google Accounts and Bigtable. Along the way, you will dig deeply into the services that are available to access the datastore with a focus on Java Data Objects, JDO, JDOQL and other aspects of Bigtable. With this solid foundation in place, you will then be ready to tackle some of the more advanced topics like integration with other cloud platforms such as Salesforce.com and Google Wave.
