Hyperbolic Equations and Waves Marcel Froissart, 2013-11-11 The success of the 1967 Battelle Rencontres was so much appreciated by the participants and organizers of this experimental set up that it was soon decided to go on with the experiment Mathematicians and physicists had found a very suitable frame to overcome their natural shyness to get occasionally interested into each others work to talk 1968 Rencontres have about it and eventually to know each other The been organized with the same idea in mind and even somewhat enlarged in the following sense the topic chosen hyperbolic equations and waves has proved a cornerstone of physics for more than a century and extends over most fields of contemporary physics It follows immediately that the wide range of physicists concerned could not be represented by more than a couple of specialists in any single field Thus aside from bridging the gap between mathematicians and physicists the 1968 Rencontres provided a rather unique occasion to plug many intra disciplinary gaps among physicists This made the Rencontres quite unpredictable as to how people would and could interact and created a very stimulating environment for an unprecedented intellectual venture From the outside it may very well look like a hodgepodge of quite unrelated ideas But it was much less so at the level of day to day discussions and informal gatherings where all slowly acquired a comprehensive synthetic view of the subject New Number Fun Maths Made Easy R A R Kumar,
