**Manual of Bone Densitometry Measurements** John N. Fordham, 2012-12-06 The importance of osteoporosis in the United Kingdom as a cause of death and disability is now well recognised There are in excess of 200 000 osteoporotic related fractures in the UK per annum associated with an estimated cost of 942 000 000 Following hip fracture it is known that about 50% of patients are unable to live independently and about 20% of such patients die within the first 6 months These figures compelling as they are reflect poorly on current medical practices which manifestly have failed to identify patients with low bone density at risk of fracture The hope is that the technical advances which have enabled bone mineral density and other allied indices to be measured with high precision and accuracy offers the chance of identifying patients at risk of fracture and guiding the clinician to make treatment decisions which may reduce the patients risk of fracture In the UK services for identifying patients at risk of fracture are still in their infancy and are not uniformly available throughout the country This situation is however likely to improve particularly following the publication of the Royal College of Physicians report Osteoporosis clinical guidelines for prevention and treatment and the recognition in Our Healthier Nation that osteoporosis prevention should be included as a target to achieve a reduction of 20% in accidents by 2010 Bone Densitometry for Technologists Sydney Lou Bonnick, 2007-11-10 Sydney Lou Bonnick MD FACP and Lori Ann Lewis MRT CDT have updated and expanded their highly praised Bone Densitometry for Technologists to reflect the latest standards and developments in the field Here radiologic technologists nurse practitioners physician assistants and dedicated densitometry technologists can find new guidelines for bone density testing new therapies for osteoporosis and new treatment guidelines for osteoporosis as well as new chapters on pediatric densitometry body composition assessments and the use of skeletal morphometry in diagnosis and fracture risk prediction **Bone Densitometry in Clinical Practice** Sydney Lou Bonnick, 2003-09-17 The second edition of Dr Sydney Lou Bonnick's text Bone Densitometry in Clinical Practice is an expansion of her highly regarded first edition which has provided the bone densitometry community with simply the best most accurate and most precisely written resource in our field Dr Bonnick has applied her very careful and exact scientific approaches to expand and improve on her widely regarded initial text In addition to the chapters in the first edition on the science of bone densitometry and its clinical application this text has new chapters and a CD ROM that come at a very critical time in our field The clinical use of bone densitometry is increasing exponentially as more professional societies have endorsements and guidelines on the application of bone densitometry in the assessment and management of osteoporosis The recent endorsement of population screening by the US Preventive Services Task Force USPSTF has now provided governmental validation to this technology whose proper use Dr Bonnick has pioneered In a new chapter Dr Bonnick compares the similarities and differences in the recent guidelines from the USPSTF and the National Osteoporosis Foundation American Association of Clinical Endocrinologists American College of Obstetrics and Gynecology and the North American Menopause
