Sanes, Thomas A. Reh, William A. Harris, 2011-01-25

Development of the Nervous System presents a broad and basic treatment of the established and evolving principles of neural development as exemplified by key experiments and observations from past and recent times. The text is organized ontogenically. It begins with the emergence of the neural primordium and takes a chapter by chapter approach in succeeding events in neural development: patterning and growth of the nervous system, neuronal determination, axonal navigation and targeting, neuron survival and death, synapse formation and developmental plasticity. Finally, in the last chapter, with the construction phase nearing completion, we examine the emergence of behavior. This new edition reflects the complete modernization of the field that has been achieved through the intensive application of molecular genetic and cell biological approaches. It is richly illustrated with color photographs and original drawings. Combined with the clear and concise writing, the illustrations make this a book that is well suited to students approaching this intriguing field for the first time. Thorough survey of the field of neural development. Concise but complete, suitable for a one semester course on upper level undergraduate or graduate level. Focus on fundamental principles of organogenesis in the nervous system. Integrates information from a variety of model systems relating them to human nervous system development, including disorders of development. Systematically develops knowledge from the description of key experiments and results. Organized ontologically. Carefully edited to be presented in one voice. New edition thoroughly updated and revised to include major new findings. All figures in full color, updated and revised. Specific attention on revising the chapter on cognitive and behavioral development to provide a foundation and outlook towards those very fast moving areas. Instructor website with figure bank and test questions.

Regulatory RNAs in the Nervous System, 2nd Edition Tommaso Pizzorusso, Alessandro Cellerino, Laure Bally-Cuif, 2018-11-13. Until about a decade ago, the non coding part of the genome was considered without function. RNA sequencing studies have shown, however, that a considerable part of the non coding genome is transcribed and that these non coding RNAs (nc RNAs) can regulate gene expression. Almost on a weekly basis, new findings reveal the regulatory role of nc RNAs exerted in many biological processes. Overall, these studies are making increasingly clear that both in model organisms and in humans, complexity is not a function of the number of protein coding genes but results from the possibility of using combinations of genetic programs and controlling their spatial and temporal regulation during development, senescence and in disease by regulatory RNAs. This has generated a novel picture of gene regulatory networks where regulatory nc RNAs

represent novel layers of regulation. Particularly well characterized is the role of microRNAs (miRNAs), small non-coding RNAs that bind to mRNAs and regulate gene expression after transcription. This message is particularly clear in the nervous system where miRNAs have been involved in regulating cellular pathways controlling fundamental functions during development, synaptic plasticity, and in neurodegenerative disease. It has also been shown that neuronal miRNAs are tightly regulated by electrical activity at the level of transcription, biogenesis, stability, and specifically targeted to dendrites and synapses. Deregulation of expression of miRNAs is proposed not only as a potential disease biomarker but it has been implicated directly in the pathogenesis of complex neurodegenerative disease. This so-called RNA revolution also led to the exploitation of RNA interference and the development of related tools as potential treatment of a vast array of CNS disease that could benefit from regulation of disease-associated genes. In spite of these advancements, the relatively young age of this field together with the inherent high molecular complexity of RNA regulation of biological processes have somewhat hindered its communication to the whole of the neuroscience community. This Research Topic aims at improving this aspect by putting around the same virtual table scientists covering aspects ranging from basic molecular mechanisms of regulatory RNAs in the nervous system to the analysis of the role of specific regulatory RNAs in neurobiological processes of development, plasticity, and aging. Furthermore, we included papers analyzing the role of regulatory RNAs in disease models from neuromuscular to higher cognitive functions and more technically oriented papers dealing with new methodologies to study regulatory RNA biology and its translational potential.

The goal of this text is to focus readers' attention on three major areas: the origin and localization of GSH in the nervous system, the multiple effects of GSH on neural health, activity, and the potential for alterations in GSH status to lead to neurological damage of the type observed in amyotrophic lateral sclerosis, Parkinson's disease, and other neurological disorders. The text also touches upon the additional roles of the antioxidant GSH, including possible neurotransmitter action, redox modulation of ionotropic receptor function, and neuroprotection against excitotoxic actions of glutamate.

Lee Hong,2015-12-18 Download PDF Download EPUB The deterioration of skeletal muscle performance e g declines in muscle strength and motor performance with advancing age has long been anecdotally recognized as Shakespeare pointed out nearly a half millennium ago in his monologue The Seven Ages of Man and has been of scientific interest for well over a century Over the past several decades the scientific and medical communities have recognized that reduced skeletal muscle performance is a debilitating and life threatening condition in the elderly For example the age associated loss of muscle strength as well as impairment in the ability to finely control movement is highly associated with physical disability and difficulty performing activities of daily living While the nervous system is widely recognized for its role in controlling skeletal muscle during motor function its role in determining the performance characteristics of aged skeletal muscle has largely been understudied Historically it was believed that these reductions in muscle performance were primarily resultant of age associated adaptations in skeletal muscle e g muscle atrophy However aging is associated with widespread qualitative and quantitative changes in both the central and peripheral nervous systems that are likely to influence numerous aspects of muscle performance such as muscle strength fatigue and motor control as well as mobility In this research topic we sought to examine a broad range of issues surrounding 1 the age related changes in nervous system anatomical physiological and biochemical changes in the central and or peripheral nervous systems 2 the functional role of these nervous system changes in contributing to altered skeletal muscle performance and or mobility and 3 physical and pharmacologic interventions that act via the nervous system to enhance muscle performance and or mobility Researchers and academicians engaged in aging neuroscience and or applied physiology research focused within the scope of this research topic were encouraged to contribute an original research article review article clinical case study hypothesis and theory article method article opinion article or technology report to this research topic Herein we present a series of outstanding articles within this scope of work including a last minute addition article from Wiesmeier Dalin and Maurer that is not mentioned in the editorial that we hope will help to vertically advance the intersecting fields of aging geriatrics and neuroscience Lastly as the editors we wish to thank all article contributors and peer reviewers for their efforts in contributing to this Research Topic journal issue book Additionally we would like to thank people everywhere who volunteer their time and body for human subjects research studies such that are presented herein It
