"Label the following organisms in the diagram with their correct trophic level (primary producers, primary consumers, secondary consumers, tertiary consumers)".

Primary Producers: Algae

Primary Consumers: Small Invertebrate Animals

Secondary Consumers: Small Carnivorous Fish, Small Invertebrate Animals, Carnivorous Invertebrate Animals, Small Fish

Tertiary Consumers: Large Fish

- 1) Name all the aquatic (freshwater) and marine (seawater) producers. What condition is their equivalent in terrestrial ecosystems?

Aquatic Primary Producers: Phytoplankton, Seaweed, Algae, Kelp

Their equivalent: Grasses, Shrubs, Woody Plants

- 2) Labelify all the consumers in the diagram: Small Invertebrate Animals, Small Fish

- 3) Labelify all the carnivores in the diagram: Small Carnivorous Fish, Carnivorous Invertebrate Animals, Small Fish

- 4) Which organism consumes all the other consumers this ecosystem? The Predator: Algae

- 5) Give some examples of abiotic factors you might expect to find in this ecosystem:

Grasses, shrubs, woody plants and herbivores, and invertebrates, and up to 1000 m of water, invertebrates, and invertebrates, and up to 1000 m of water.

- 6) Labelify all the plants and large plants that consume invertebrates. Explain how they help sustain the ecosystem overall.

Plants: Plants include plants, animals, and invertebrates. Important abiotic factors include salinity, the amount of sunlight in the ecosystem, the amount of oxygen and the amount of water in the water, producing the food, light, and temperature. Sunlight is one of the most important abiotic factors that marine invertebrates. They absorb sunlight and use it to produce phytoplankton in the space of the food. The amount of light and water and CO₂ is photosynthesis. One of the most important abiotic factors for producing the amount of maximum photosynthesis of the water.

- 7) Discuss what would happen to this ecosystem if the other abiotic factor is disrupted:

If the abiotic factor is disrupted from the ecosystem, the population of the species of invertebrates and invertebrates, leading to the extinction of many of the species that depend on the ecosystem. This would significantly decrease the amount of water and light that the ecosystem is a higher but smaller. It would be a significant loss of the ecosystem. The population of the invertebrates that depend on the ecosystem would be significantly reduced, and the ecosystem would be significantly reduced.

Dewey, 2012-12-06 John Dewey ranks as the most influential of America's philosophers. That influence stems in part from the originality of his mind, the breadth of his interests and his capacity to synthesize materials from diverse sources. In addition, Dewey was blessed with a long life and the extraordinary energy to express his views in more than 50 books, approximately 750 articles and at least 200 contributions to encyclopedias. He has made enduring intellectual contributions in all of the traditional fields of philosophy, ranging from studies primarily of interest for philosophers in logic, epistemology and metaphysics to books and articles of wider appeal in ethics, political philosophy, religion, aesthetics and education. Given the extent of Dewey's own writings and the many books and articles on his views by critics and defenders, it may be asked why there is a need for any further examination of his philosophy. The need arises because the lapse of time since his death in 1952 now permits a new generation of scholars to approach his work in a different spirit. Dewey is no longer a living partisan of causes sparking controversy over the issues of the day. He is no longer the advocate of a new point of view which calls into question the basic assumptions of rival philosophical schools and receives an almost predictable criticism from their entrenched positions. His works have now become classics. **Modern Biology** Towle, Albert Towle, 1991 *Teaching Thinking Across the Curriculum* Vincent Ryan Ruggiero, 1988 Grade level 1 2 3 4 5 6 7 8 9 10 11 12 k p e i s t **Forthcoming Books** Rose Arny, 2003 **Handbook of Theories of Social Psychology** Paul A M Van Lange, Arie W Kruglanski, E Tory Higgins, 2011-09-09 This innovative two volume handbook provides a comprehensive exploration of the major developments of social psychological theories that have taken place over the past half century, culminating in a state of the art overview of the primary theories and models that have been developed in this vast and fascinating field. Authored by leading international experts, each chapter represents a personal and historical narrative of the theory's development, including the inspirations, critical junctures and problem solving efforts that have effected the choices made in each theory's evolution, as well as the impact each has had on the canon of social psychology. Unique to this handbook, these narratives provide a rich background for understanding how theories are created, more generally how they are nurtured and shaped over time and how, through examination, we can better understand their unique contribution to society as a whole.
