Renewable Energy Production from Energy Crops and Agricultural Residues Biomass represents an important source of
renewable and sustainable energy production Its increasing consumption is mainly related to the increase in global energy
demand and fossil fuel prices but also to a lower environmental impact compared to non renewable fuels These factors take
RED II directives into consideration In the past forestry interventions were the main supply source of biomass but in recent
decades two others sources have entered the international scene These are dedicated energy crops and agricultural residues
which are important sources of biomass for biofuel and bioenergy Below we consider four main value chains Oil crops Oil
