Tens of thousands of chemicals are released into the environment every day High throughput screening HTS has offered a more efficient and cost effective alternative to traditional toxicity tests that can profile these chemicals for potential adverse effects with the aim to prioritize a manageable number for more in depth testing and to provide clues to mechanism of toxicity The Tox21 program a collaboration between the National Institute of Environmental Health Sciences NIEHS National Toxicology Program NTP the U S Environmental Protection Agency s EPA National Center for Computational Toxicology NCCT the National Institutes of Health NIH National Center for Advancing Translational Sciences NCATS and the U S Food and Drug Administration FDA has generated quantitative high throughput screening qHTS data on a library of 10K compounds including environmental chemicals and drugs against a panel of nuclear receptor and stress response pathway assays during its production phase phase II The Tox21 Challenge a worldwide modeling competition was launched that asks a crowd of researchers to use these data to elucidate the extent to which the interference of biochemical and cellular pathways by compounds can be inferred from chemical structure data In the Challenge participants were asked to model twelve assays related to nuclear receptor and stress response pathways using the data generated against the Tox21 10K compound library as the training set The computational models built within this Challenge are expected to improve the community s ability to prioritize novel chemicals with respect to potential concern to human health This research topic presents the resulting computational models with good predictive performance from this Challenge
