**The Connected Past** Tom Brughmans, Anna Collar, Fiona Susan Coward, 2016 One of the most exciting recent developments in archaeology and history has been the adoption of new perspectives which see human societies in the past as in the present as made up of networks of interlinked individuals This view of people as always connected through physical and conceptual networks along which resources information and disease flow requires archaeologists and historians to use new methods to understand how these networks form function and change over time The Connected Past provides a constructive methodological and theoretical critique of the growth in research applying network perspectives in archaeology and history and considers the unique challenges presented by datasets in these disciplines including the fragmentary and material nature of such data and the functioning and change of social processes over long timespans An international and multidisciplinary range of scholars debate both the rationale and practicalities of applying network methodologies addressing the merits and drawbacks of specific techniques of analysis for a range of datasets and research questions and demonstrating their approaches with concrete case studies and detailed illustrations As well as revealing the valuable contributions archaeologists and historians can make to network science the volume represents a crucial step towards the development of best practice in the field especially in exploring the interactions between social and material elements of networks and long term network evolution

**Process Engineering Renewal 1** Éric Schaer, Jean-Claude André, 2020-03-31 Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries. Its success is incontrovertible with the exponential increase in techniques and innovations. Rapid advances in new technologies such as artificial intelligence as well as current societal needs: sustainable development, climate change, renewable energy, the environment are developments that must be taken into account in industrial renewal. *Process Engineering Renewal 1*, the first volume of three, focuses on training, demonstrating the need for innovation in order for the field to have a framework that is sustainable in a highly changeable world. *Sciences, technosciences et foi à l'heure de l'écologie intégrale* Thierry Magnin, Philippe Gagnon, Paulo Rodrigues, 2025-07-03 Depuis une cinquantaine d'années de nombreux travaux de recherche ont permis de mieux articuler les discours scientifiques et théologiques. Propos de la création s'appuyant sur ces travaux, la conférence internationale organisée en 2024 à l'Université Catholique de Lille dont les Actes sont ici publiés avait pour but de préciser comment la vision de l'écologie intégrale chère au pape François dans *Laudato Si* enrichit le dialogue entre science et théologie au moment où se développent les technosciences numériques, nanobio, neurotechnologies et l'Intelligence artificielle (IA). On trouvera ici les interventions de théologiens, philosophes et spécialistes des sciences humaines en dialogue avec des scientifiques investis dans la physique, la biologie, les technosciences et l'IA. Quatre conférences plénières introduisent les travaux portant sur les domaines suivants : la théologie de la création, la révolution numérique, la question du progrès scientifique aujourd'hui, l'anthropologie chrétienne, la pensée sociale chrétienne, puis la paix et la fraternité dans un contexte d'œcuménisme et de dialogue interreligieux. L'originalité de l'approche du dialogue science-théologie à l'heure de l'écologie intégrale se dessine progressivement et fait l'objet d'une relecture finale sous forme de bilan de la conférence.

**Material Participation: Technology, the Environment and Everyday Publics** N. Marres, 2012-07-30 This book develops a fresh perspective on everyday forms of engagement, one that foregrounds the role of objects, technologies and settings in democracy. Examining a range of devices from smart meters to eco-homes, the book sets out new concepts and methods for analyzing the relations between participation, innovation and the environment. *Les Sciences dans la mêlée* Bernadette Bensaude-Vincent, 2023-10-13 T00:00:00+02:00 Hystérie vaccinale, refus de la 5G, théories du complot suscitent de nombreuses lamentations sur la montée de l'irrationalité et la perte de confiance dans la communauté scientifique. Pour y faire face, certains continuent d'en appeler à l'autorité de la science et des faits comme des totems. Cet affrontement rend aveugle aux problèmes inhérents à la fabrication des savoirs et sourd aux préoccupations des publics concernés. Du changement climatique à la pandémie de Covid-19, les auteurs analysent les récentes controverses et proposent ainsi une réflexion sur les pratiques de recherche et d'expertise en temps de crise. En donnant des clés pour repenser les rapports entre sciences, industrie et démocratie, cet essai salvateur plaide pour une transformation de la confiance généralisée en une confiance exigeante, seule capable d'activer de nouveaux modes de production et de réception des sciences en société. Bernadette Bensaude-Vincent

**Beyond Bakelite** Joris Mercelis, 2020-03-24. The changing relationships between science and industry in the late nineteenth and early twentieth centuries illustrated by the career of the father of plastics. The Belgian born American chemist inventor and entrepreneur Leo Baekeland 1863-1944 is best known for his invention of the first synthetic plastic his near namesake Bakelite which had applications ranging from electrical insulators to Art Deco jewelry. Toward the end of his career Baekeland was called the father of plastics given credit for the establishment of a sector to which many other researchers inventors and firms inside and outside the United States had also made significant contributions. In *Beyond Bakelite* Joris Mercelis examines Baekeland's career using it as a lens through which to view the changing relationships between science and industry on both sides of the Atlantic in the late nineteenth and early twentieth centuries. He gives special attention to the intellectual property strategies and scientific entrepreneurship of the period making clear their relevance to contemporary concerns. Mercelis describes the growth of what he terms the science industry nexus and the developing interdependence of science and industry. After examining Baekeland's emergence as a pragmatic innovator and leader in scientific circles Mercelis analyzes Baekeland's international and domestic IP strategies and his efforts to reform the US patent system his dual roles as scientist and industrialist the importance of theoretical knowledge to the science industry nexus and the American Bakelite companies research and development practices technically oriented sales approach and remuneration schemes. Mercelis argues that the expansion and transformation of the science industry nexus shaped the careers and legacies of Baekeland and many of his contemporaries.

Dans ces organisations se déroule aujourd'hui notre quotidien et se dessine notre avenir. L'ouvrage a pour objectif de proposer des grilles de lecture pour comprendre les enjeux idéologiques, éthiques et pragmatiques dont elles sont les réceptacles.

*Le gouvernement des ressources naturelles: science et territorialités de l'État québécois, 1867-1939* Stéphane Castonguay, 2021-04-15. The Government of Natural Resources explores scientific and technical activity in Quebec from Confederation until the eve of the Second World War. Scientific and technical personnel are an often quiet presence within the state but they play an integral role. At the turn of the twentieth century the provincial government created geology forestry fishery and agronomy services. These new services drew from recently established university technical programs to amass a corps of skilled employees to support their mission exploiting resources and occupying territory. Stéphane Castonguay traces the history of mining logging

hunting fishing and agriculture in Quebec to reveal how territorial and environmental transformations thus became a tool of government By helping to define and shape such interventions scientific activity contributed to state formation and expanded administrative capacity The lessons that this thoughtful reconceptualization of resource development offers reach well beyond provincial borders
