

SECTION 3 - AIR INTAKE AND COOLING

AIR CLEANER SERVICE

This engine is equipped with a dry type air cleaner element, which should be checked every 50 operating hours and replaced if dirty. It should be checked and if necessary replaced more often under extremely dirty dusty conditions. Do not wash element in any liquid or attempt to blow dirt off with air hose as this will puncture filter element. When replacing element, use only genuine Kohler element. Carefully handle new element — do not use if gasket surfaces are bent or twisted. Check the following when installing new element (see Figure 3-1):

Figure 3-1. Air Cleaner Components

1. Back plate must be flat on gasket of carburetor elbow. Replace back plate if bent or cracked.
2. Gasket surfaces of element must be flat against back plate and cover to seal effectively.
3. Seal on cover must be in place to reduce noise and vibration of the cover. Vibration can cause stud hole in cover to enlarge, thus permitting dirt to enter carburetor.
4. Wing nuts must be finger tight — do not overtighten.

COOLING SYSTEM SERVICE

Air is drawn into the cooling shroud by fins on the flywheel. The grass screen and cooling fins on the block and cylinder heads must be kept clean and unobstructed at all times. (IMPORTANT: Never operate engine with blower housing or cooling shrouds removed. These direct air flow past cooling fins. Removal results in improper air circulation, overheating and engine damage.)

External surfaces must be maintained in clean condition, free of oil and dirt accumulation. This is required not only for safety and appearance, but because dirty external surfaces result in poor cooling efficiency (see Figure 3-2).
