

Solutions to Chapter 2 Exercise Problems

Introduction

The solutions in this chapter have been developed using SolidWorks. Other parametric design programs will follow the same procedures although the command structure will vary from program to program. The SolidWorks files for the individual figures are available in a separate folder. Typically, the final figure gives the solution to the problem.

Problem 2.1

A slider crank mechanism is to move the slider 1" for 40° of rotation of the crank as shown in the figure. Using GCP methods, develop a graphical solution to determine the necessary crank and coupler lengths. Explicitly identify the layer structure used, and make a separate layer for all possible input dimensions. Also, explicitly list the driving and driven variables. Show the use of your graphical program to resolve the problem when the slider distance is 1.5 in and the crank rotates through an angle of 60°

Figure P2-1.1 Original drawing for Problem 2.1.

Solution to Problem 2.1

If the fixed pivot and slider line lie on a horizontal line, the problem is defined by a total 6 variables, four of which are independent. We can represent these as shown in Table P2-1.1.

To begin the solution procedure, open the blank drawing sheet (*Blank_Worksheet.SLDWORK*) in SolidWorks. Set up the following layers: *ProblemDrawing*, *InputVariables*, *SolutionConstruction*, *SolutionDimensions*, *FinalLinkage*, and *Dimensions*. *InputVariables* contains only the input dimensions which will be used as input variables for the graphical program we will develop. *SolutionDimensions* contains only the dimensions for the two link lengths which were not specified. *Dimensions* contains miscellaneous dimensions such as those associated with pin

advanced balancing methods for planar and spatial linkages hand operated and automatic robot manipulators are presented It is organized into three main parts and eight chapters The main parts are the introduction to balancing the balancing of linkages and the balancing of robot manipulators The review of state of the art literature including more than 500 references discloses particularities of shaking force moment balancing and gravity compensation methods Then new methods for balancing of linkages are considered Methods provided in the second part of the book deal with the partial and complete shaking force moment balancing of various linkages A new field for balancing methods applications is the design of mechanical systems for fast manipulation Special attention is given to the shaking force moment balancing of robot manipulators Gravity balancing methods are also discussed The suggested balancing methods are illustrated by numerous examples **Design Engineering** W.
