**Lasers** Charles Blain, 2002 Developments in lasers continue to enable progress in many areas such as eye surgery the recording industry and dozens of others This book presents citations from the book literature for the last 25 years and groups them for ease of access which is also provided by subject author and titles indexes *Smart Textiles Production* Inga Gehrke, Vadim Tenner, Volker Lutz, David Schmelzeisen, Thomas Gries, 2019-04-11 The research field of smart textiles is currently witnessing a rapidly growing number of applications integrating intelligent functions in textile substrates With an increasing amount of new developed product prototypes the number of materials used and that of specially designed production technologies are also growing This book is intended to provide an overview of materials production technologies and product concepts to different groups concerned with smart textiles It will help designers to understand the possibilities of smart textile production so that they are enabled to design this type of products It will also help textile and electronics manufacturers to understand which production technologies are suitable to meet certain product requirements After an introduction to smart textiles and their market relevance different material types for functional textiles are described along with their properties application areas and product examples Special attention is given to materials for the realization of electrical conductivity in textiles as these are crucial for the following overview on sensor and production technologies Next textile based sensors are introduced While numerous textile based sensors ranging from sensing fibers to coatings and three dimensional structures have been developed their specific properties and usage are not clear Bosowski et al have suggested a structure for a classified catalogue as knowledge basis to support the smart textile product development process This chapter develops the classification further and implements it in a catalogue to be used by practitioners from research and industry when developing and designing textiles with sensing capabilities The full catalogue is reported in the appendix The third part of the book starts by describing the state of the art of research on production technologies for the integration of conductive materials into textile substrates which include weaving knitting embroidering printing without mentioning specific products Different variants of each technology are presented Additionally associated technologies to integrate electrical components in textile substrates are outlined This part closes by reporting the current state of research on automated production systems for electronics integration into textiles In the last part of the book product and design concepts for smart textiles are evaluated along the example of touchpads *Automotive Power Systems* Dorin O. Neacșu, 2020-09-21 Vehicles are intrinsically linked to our lives This book covers all technical details of the vehicle electrification process with focus on power electronics The main challenge in vehicle electrification consists of replacing the engine based mechanical pneumatic or hydraulic ancillary energy sources with electrical energy processed through an electromagnetic device The book illustrates this evolutionary process with numerous series production examples for either of body or chassis systems from old milestones to futuristic luxury vehicles Electrification of ancillaries and electric propulsion eventually meet into an all electric vehicle and both

processes rely heavily on power electronics Power electronics deals with electronic processing of electrical energy This makes it a support technology for the automotive industry All the automotive visions for the next decade 2020 2030 are built on top of power electronics and the automotive power electronics industry is expected at 15% compound annual growth rate the highest among all automotive technologies Hence automotive power electronics industry is very appealing for recent and future graduates The book structure follows the architecture of the electrical power system for a conventional engine based vehicle with a last chapter dedicated to an introduction onto electric propulsion The first part of the book describes automotive technologies for generation and distribution of electrical power as well as its usage within body systems chassis systems or lighting The second part explores deeper into the specifics of each component of the vehicle electric power system Since cars have been on the streets for over 100 years each chapter starts with a list of historical achievements Recognizing the engineering effort span over more than a century ennoble the R D efforts of the new millennium Focus on history of electricity in vehicle applications is another attractive treat of the book The book fills a gap between books targeting practical education and works sharing advanced academic vision offering students and academics a quick tour of the basic tools and long standing infrastructure and offering practicing engineers an introduction on newly introduced power electronics based technologies It is therefore recommended as a must have book for students and early graduates in automotive power electronics activities
