The Handbook of Mites of Economic Plants Vincenzo Vacante, 2015-12-21 Mites pose a serious problem to plants worldwide, attacking crops and spreading disease. When mites damage crops of economic importance, the impacts can be felt globally. Mites are among the most diverse and successful of invertebrates, with over 45,000 described species, with many more thousands to be discovered. They are responsible for a significant portion of the losses of crops for food, fibre, industry, and other purposes, and require expensive and often controversial pest control measures. Understanding these mites is vital for entomologists, pest researchers, agronomists, and food producers. Knowledge of mite pests helps to inform control strategies and optimize the production of economic plants and the agrarian economy. This encyclopedia provides a thorough coverage of the mites and the problems they cause to crops, yet it is easily searchable, organised by mite species, and subdivided into helpful headings. It takes a worldwide view of the issue of mites injurious to economic plants, describing mites prevalent in different regions and discussing control methods appropriate in different environments. This book provides an encyclopaedic reference to the major mites described by family, in terms of their internal and external morphology, bio-ecology, and family systematics. Methods of mite collection and laboratory study are described, as well as species diagnostic characteristics, worldwide distribution, host plants, identification by the type of damage they cause, and control strategies, including chemical and biological intervention and integrated pest management measures. Mites of the following families are included: Eriophyoidea, Tarsonemidae, Tuckerellidae, Tenuipalpidae, Tetranychidae, Acaridae, Penthaleidae. **Mites of Economic Plants** is an important resource for students of entomology and crop production, and as a thorough reference guide for researchers and field workers involved with mites, crop damage, and food production.

Powdery Mildew Disease of Crucifers: Biology, Ecology and Disease Management Govind Singh

Saharan, Naresh K. Mehta, Prabhu Dayal Meena, 2019-11-22 Powdery mildew disease is the fourth most widespread disease in cruciferous crops and a devastating effect causing significant losses in terms of quality and quantity in rapeseed and mustard. Powdery mildews are also a favourable host pathosystem model for basic research on host-parasite interactions, developmental morphology, cytology and molecular biology to identify the effector proteins, genes governing different biological functions. This book provides a comprehensive overview of all the published information in the field for researchers, teachers, students, extension experts, industrialists and farmers and includes illustrations, photographs, graphs, figures, tables, histograms, micrographs, electron micrographs and flow charts to aid understanding. It also describes standardized, reducible techniques. The book discusses each disease in detail, describing the distribution, symptomatology, host range, yield losses and disease assessment, as well as the taxonomy, morphology, phylogeny, variability, sporulation, survival and perpetuation of the pathogen. Further, it explores topics such as spore germination, infection, pathogenesis, disease cycle, epidemiology, forecasting, fine structures, host resistance, biochemical, histological, genetic and molecular aspects such as cloning and mapping of R genes, sources of resistance, disease resistance breeding and the genetics of host-parasite interactions and disease management.

The volume begins by teaching the reader to formulate a comprehensive differential diagnosis of farm worker illnesses, including stings and bites, green tobacco syndrome, infections and heat and weather-related events, as well as exposures to the numerous chemicals found on the farm. The toxicity of various farm products such as insecticides, herbicides, rodenticides and petroleum products are each discussed in their own chapter, enabling the reader to rapidly obtain vital information on their mechanism, clinical signs and symptoms and differential diagnosis. The reader will learn to utilize information on pesticide labels and safety data sheets, including proper use of personal protective equipment. Chapter authors discuss a variety of other topics, including toxic gas exposures on the farm, disease associations with chronic chemical exposures, illicit drug use and miscellaneous conditions that a rural practitioner should be familiar with that may occur on the farm, such as heat and cold injuries.
