major role that morphic resonance plays not just in animal instincts and cultural inheritance such as religion and ritual but also in the larger process of evolution which Sheldrake shows to be more an interplay of habit and creativity than a mere survival of the fittest Offering a replacement for the outdated mechanistic worldview that has dominated biology since the nineteenth century Sheldrake's new understanding of life matter and mind shows that rather than being ruled by fixed laws nature is essentially habitual And because memory is inherent in nature he explains in order to survive successfully for generations to come we will have to give up our old habits of thought and adopt new ones habits that are better adapted to life in a world living in the presence of the past as well as the presence of the future
