## Energy Flow + food webs + energy pyramids

- Sun is the main source of energy
- Autotrophs (producers)
  - Make own energy/food (not from other organisms)
  - Photosynthesis: Energy from sunlight
  - Chemosynthesis: energy made during chemical reactions
  - EX: Trees, Plants, Algae
- Decomposers: break down organic matter such as dead organism remains
  - Allows other organisms to use these materials from decaying materials for own use.
- Heterotrophs (consumers): need to eat other organisms in order to get the materials you need to maintain homeostasis
  - Primary consumer (1)- eats the producer
  - secondary consumers (2)- eats 1 consumer
  - Tertiary consumer- the TOP consumer that eats secondary consumer

## Energy Pyramid

- Represents the available amount of energy at each trophic level
- Energy moves in ONE direction
- Most energy at the bottom of the pyramid
- 10% Rule
  - 90% of energy is used for bodily functions (ex. Digestion and movement) and is released as heat
  - Only 10% is transferred to the next level. Energy is lost as you move up.
  - When you consume food, energy turns into HEAT.
